within each country of should write to the publishers. No charge whatsoever is made East Asia lists companies by their country of operation. for publishing details about a company.

This book attempts to bridge academic knowledge and practitioner's knowledge regarding the control and coordination of subsidiaries in Japan. It specifically explores two questions: why do corporations establish subsidiaries and form corporate groups? How do corporate groups manage their subsidiaries? Based on the case studies presented in the book, the author identifies four different types of parent-subsidiary relationships and uses this typology to understand control and coordination issues within Japanese organizations. The chapters in the book are designed to cover many characteristics of large Japanese corporate groups. Chapter 2 gives the definition of corporate group in Japan and distinguishes it from the keiretsu business group, while Chapter 3 provides a backdrop and context for understanding the corporate landscape in which Japanese firms today operate. Chapters 4 and 5 provide a literature review on some of the major literatures that are related to the research questions concerning why corporate groups exist and how they are managed. Chapter 6 attempts to bridge academic

knowledge with practitioners knowledge by looking at five corporate groups: Hitachi, Panasonic, Mitsubishi Heavy Industry, Nihon Yusen and Japan Airlines, and by identifying areas where practitioner's knowledge could be used to expand existing theories. Chapter 7 proposes a four-part classification of subsidiaries to facilitate the discussion of different issues that arise under different parent-subsidiary settings. Chapter 8 attempts to illustrate a simplistic roadmap for creating successful subsidiary management, while Chapter 9 concludes the book. Written in a simple and accessible manner, this book will be of interest to business practitioners, decision makers in organizations and academics alike.

SURPLUS RECORD, is the leading independent business directory of new and used capital equipment, machine tools, machinery, and industrial equipment, listing over 95,000 industrial assets; including metalworking and fabricating machine tools, chemical and process equipment, cranes, air compressors, pumps, motors, circuit breakers, generators, transformers, turbines, and more. Mobile Working Machines are defined by

three characteristics. These machines have a certain task of doing a working process, they are mobile, and they have a significant energy share in their working functions. The machines should be as productive, efficient and of high quality as possible. All these machines in the field of agriculture, forestry, construction, logistics, municipal sector, and in other special applications work in different applications. But, many technologies placed in the machines are the same, similar or comparable; therefore, different branches can learn from each other. Mobile Working Machines provides a wide and deep view into the technologies used in these machines. Appropriate for new engineers as well as those who wish to increase their knowledge in this field, this book brings together all the latest research and development into one place.

This book provides an impressive overview of emerging technologies, especially nanotechnologies and biotechnologies, and their prospective applications. It identifies and describes existing and potential markets for emerging technology-based applications, and projects scenarios for macroeconomic development based on these technologies. Integrated roadmaps for the development of a nano- and bioindustry are shown and policy measures and corporate strategies developed to advance these technologies. These measures are illustrated using roadmaps and policy case studies. The book combines a practical, comprehensive overview of the technical side of emerging technologies and their applications in various fields with an analysis of market developments and characteristics.
