Moon Phases for 2019 or any year with full moon and new moon times. When is the next full moon?

Moon

The Moon is an astronomical body that orbits Earth as its only natural satellite. It is the fifth-largest satellite in the Solar System, and the largest among planetary satellites relative to the size of the planet that it orbits (its primary).

Moon - Wikipedia

Moon.nasa.gov is NASA's deep dive resource for lunar exploration from astronauts to robots.

Moon: NASA Science

Moon Phases for 2019 or any year with full moon and new moon times. When is the next full moon?

Moon Phases 2019 - Lunar Calendar - Time and Date

The brightest and largest object in our night sky, the Moon makes Earth a more livable planet by moderating our home planet's wobble on its axis, leading to a relatively stable climate. It also causes tides, creating a rhythm that has guided humans for thousands of years. The Moon was likely formed after a Mars-sized body collided with Earth.

Overview | Earth's Moon - NASA Solar System Exploration

Find out what NASA knows about Earth's moon, how we've learned about it and what we're doing to send humans back there by 2024.

The Moon | NASA

The moon is the easiest celestial object to find in the night sky — when it's there. Earth's only natural satellite hovers above us bright and round until it seemingly disappears for a few nights.
