Locate federal cases decided in the U.S. Supreme Court, Court of Appeals, district courts, Claims Court, bankruptcy courts, Court of Military Appeals, the Courts of Military Review, and other federal courts. This Key Number Digest contains all headnotes, classified according to West's® Key Number System, for federal court decisions reported from 1984 to the present. The topics are listed in alphabetical order. The Key Numbers within those topics are listed in numerical order. Each topic begins with scope notes about subjects included and subjects excluded and covered by other topics. Also, there is an outline of the topic, which includes a list of all Key Numbers in that topic. Headnotes are collected by jurisdiction or court and filed according to the West Key Number System®.

This book introduces the most important and best studied extracellular and pericellular molecules of the tumor microenvironment. It gives a comprehensive overview of their role in tumor development and cancer progression. Twelve chapters deal with the biochemical and biophysical background of extracellular matrix (ECM) changes in the tumor stroma compared to the physiological state. The reader learns about the major ECM components that are deregulated during cancer development and how they are associated with cancer progression associated with survival, inflammation process, among others. These are followed by recent data about the cooperative activity of extracellular matrix in tumor metabolism, promoting cancer progression. Two chapters focus specifically on the critical role of the ECM in tumor angiogenesis, linking this process to cellular infiltration and metastatic behavior of tumors. The final part describes how the ECM influences the success of immunotherapy and chemotherapy in cancer patients, its potential as biomarkers for diagnosis, prognosis, and therapeutic target, as well as the mechanism of resistance-associated changes in the ECM. This book is an interesting read for anyone who want to know more about ECM and cancer biology. Early career scientists can use it as an introduction to the field, offering an excellent tool for studying ECM. Advanced researchers and clinicians can gain a broader overview of the subject, considering the role of ECM for influencing every cancer hallmark as well as in the response of cancer treatments. The work serves to inspire future research and shows that the ECM should be considered as an important factor in the development of cancer therapeutics. The series "Biology of Extracellular Matrix" is published in collaboration with the American Society for Matrix Biology and the International Society for Matrix Biology.

The principle of party autonomy in contractual choice of law is widely recognised in the law of most jurisdictions. It has been more than 30 years since party autonomy was first accepted in Chinese pri-

vate international law. However, the legal rules provided in legislation and judicial interpretations concerning the application of the party autonomy principle are abstract and open-ended. Without a critical understanding of the party autonomy principle and appropriate interpretations of the relevant legal rules, judges have not exercised their discretionary power appropriately. The party autonomy principle has been applied in a way that undermines its very purpose, that is, to protect the legitimate expectations of the parties and promote the predictability of outcomes in transnational commercial litigation. Jieying Liang addresses the question of how, when, and with what limitations, parties' choice of law clauses in an international commercial contract should be enforced by Chinese courts.

For well over a decade, this prized guide has served practitioners handling the legal ramifications of international contracting projects. The fifth edition expands on issues discussed in the earlier one, along with new topics that continue to redefine the researching, drafting, and execution of international contracts. All the invaluable features of earlier editions are of course still here, including analysis of key contract issues unique to various types of contracting, common contract clauses, contract checklists, insights gleaned from actual cases and arbitral proceedings, and clear explanation of the principles of good contract drafting. The major relevant international conventions, model laws, pertinent national laws, legal guides, and other documents and instruments are all covered, with primary texts provided in the appendices. Some of the new issues and topics covered include: new potential causes of force majeure and hardship (pandemics and BREXIT); review of Incoterms 2020; new clauses covered (anti-slavery, exclusion, interpretation, no-waiver, sub-contracting, sustainability clauses, among others); rise of new international commercial courts; legaltech, smart contracts, and artificial intelligence; ethics; implementation of technology in legal practice; enforceability of penalty clauses; Internet sales and agency contracts; long-term contracts and goodwill compensation; data protection and the General Data Protection Regulation (GDPR); alliance, collaboration, and cooperation agreements; noncompete and nonsolicitation clauses; e-mail disclaimers; and separation and release agreements. The book acts as a single-volume reference in the negotiating and drafting of international contracts and offers expert insights regarding the reasonableness of many contract clauses and the likelihood of their enforcement in a foreign jurisdiction. An adroit combination of contract theory and contract practice, the book continues to provide guidance to law practitioners and students alike. "International Contracting is an excellent single volume reference that highlights the different issues relating to a variety of contracts. I recommend it to drafting attorneys writing domestic as well as transborder contracts." - Christopher E. Howard (complex commercial transactions and development projects), Managing Partner, Pierce Atwood LLP, Portland, Maine "The latest edition of Professor DiMatteo's International Contracting constitutes a broad yet detailed coverage of international contract law and laws, as well as international practice. It drills down into the level of detail that supplies invaluable practical guidance of the sort not to be found in other publications." - Professor Michael G. Bridge, London School of Economics "International Contracting is an ideal source for practitioners whether of the civil or common law. It also provides a concise review of international contracting issues and practices for the scholar and student interested in this area of law. I highly recommend it as a general resource on the topic." - Michel Cannarsa, Dean & Professor, Lyon Catholic University
