In Rules for Reformers, Douglas Wilson poaches the political craft of radical progressives and applies it to Christian efforts in the current culture war. The result is a spicy blend of combat manual and cultural manifesto. Rules for Reformers is a little bit proclamation of grace, a little bit Art of War, and a little bit analysis of past embarrassments and current cowardice, all mixed together with a bunch of advanced knife-fighting techniques. As motivating as

it is provocative, Rules for Reformers is just plain good to read. Thanks to Saul Alinsky's Rules for Radicals: A Practical Primer for Realistic Radicals--a book well-beloved by Barack Obama, Hillary Clinton, and many others--for much of the shrewd advice, and for none of the worldview.

Cultural messages bombard students daily, laden with unstated rules about what makes our work valuable, our bodies ideal, our connections meaningful. Acting Out Culture empowers students to critically read those messages and use writing to speak back to their culture and question its rules. This book appeals especially to those students who are not full participants in the dominant culture, as well as

to their instructors, who want to help students see how subtle (and not so subtle) cultural forces can shape their lives--and how they can challenge and resist those forces. The new edition of Acting Out Culture builds on that success, with provocative readings (more than 50 percent of them new) that challenge the rules we live by; pedagogical tools to encourage students to read, think, and write critically about their culture; and instructional support featuring sample syllabi, additional discussion topics, and ideas for teaching with visuals and online content.

Using both Metric and the inch-foot systems this guide provides detailed information on various types of blueprints and drawings. There are questions at the end of each section to test the users knowledge and answers are provided at the end of the book.

The progress of man really started at the time he began to use metals. Until man became the master of metals life was hard, cruel and difficult. Many people seem to think these conditions of life have not changed very much. But do you realize how much easier life is because of metals? Without metals many products we know as

common necessities would be impossible, while other items would be very unsatisfactory substitutes by present-day standards. Without metals our activities would depend on our ability to use wood and stone. Stone axes and hammers may have served the caveman, but they would not meet the needs of skilled craftsmen of today. With only stone and wood available as materials, practically all our modern conveniences would be non-existent. We would not have modern means of transportation—the automobile, ocean liner, train or airplane. Likewise, we would not have modern means of communication—the radio, telephone or television. In fact, we now depend so much on metals it is difficult to think of how we could live without them.

This book is intended to be as much a part of the fabricator's toolbox as a hammer or a piece of chalk. During the apprenticeship stage it acts as an easy to follow instruction manual and later as a handy reference to assist with calculation and development. The many notes made up over the years whilst instructing apprentices and recently qualified boilermakers form the basis for this book. It is designed to guide the apprentice from day one in the workshop, through the many mathematical applications he will need to master on his journey to becoming a competent craftsman. The

information contained in this book will not become faded with age, or outdated, because the formulae contained herein are just as relevant today as they were when they were written down eons ago. The purpose of this book is to bring them all together in an easy to understand manner with working examples and explanatory diagrams.
