The document, "Methods for Antimicrobial Dilution and Disk Susceptibility Testing of Infrequently Isolated or Fastidious Bacteria," was published as an approved guideline (M45-A) in May 2006 and represents a

consensus approach to standardized antimicrobial susceptibility testing of 14 genera, species, or organism groups of uncommon or fastidious bacteria.

Accurate antimicrobial susceptibility testing is vital for patient care and surveillance of emerging antimicrobial resistance. The National Committee for Clinical Laboratory Standards (NCCLS) outlines generally agreed upon guidelines for reliable and reproducible results.
