Networks can be wired or wireless with most networks being a mixture of both. Wired vs Wireless Networks. Early (pre 2008) networks were predominately wired. Today however most networks will use a mixture of wired and wireless network. Wired networks use Ethernet as the data link protocol. This is unlikely to change with the IOT, as IOT devices will be predominantly wireless.

The first step when building a network, even a worldwide network such as the Internet, is to connect two hosts together. This is illustrated in the figure below. Fig. 2.1: Connecting two hosts together To enable the two hosts to exchange information, they need to be linked together by some kind of physical media.

The three most popular types of network for the home are wired, wireless and powerline. Wired home networks require all devices to be connected via Ethernet cables to your broadband router. This option is often best if your equipment is near the router. Your devices will require an Ethernet port, which rules out most smartphones and tablets.
