## W9VE32 - BELTRAN BAILEY

### Noise Trader Risk in Financial Markets - DASH Harvard The Economic Consequences of Noise Traders

This result obtains because noise trader risk makes assets less attractive to risk-averse arbitrageurs and so drives down prices. If noise traders on average overestimate returns or underestimate risk, they invest more in the risky asset on average than sophisticated investors and may earn higher average returns.

A noise trader also known informally as idiot trader is described in the literature of financial research as a stock trader whose decisions to buy, sell, or hold are irrational and erratic. The presence of noise traders in financial markets can then cause prices and risk levels to diverge from expected levels even if all other traders are rational.

Noise traders earn high returns because they bear a large amount of the market risk which the presence of noise traders creates in the assets that they hold: their presence raises expected returns because sophisticated investors dislike bearing the risk...

DeLong, JB, Andrei Shleifer, Lawrence H Summers, and Robert J Waldmann. 1993. "Noise Trader Risk in Financial Markets." *Journal of Political Economy* 98 (4).

What is a Noise Trader. Noise trader is generally a term used to describe investors who make decisions regarding buy and sell trades without the support of professional advice or advanced fundamental analysis. Trading by noise traders tends to be impulsive and based on irrational exuberance, fear or greed.

BF/U2 Topic 2 Noise Trader Risk in financial market, Attitude to Risk. Noise trader is generally a term used to describe investors who make decisions regarding buy and sell trades without the support of professional advice or advanced fundamental analysis.
