Telecommunications - central to our daily lives - continues to change dramatically. These changes are the result of technological advances, deregulation, the proliferation of broadband service offers, and the spectacular popularity of the Internet and wireless services. In such dynamic technological and economic environment, competition is increasing among service providers and among equipment manufacturers. Consequently, optimization of the planning process is becoming essential. Although telecommunications network planning has been tackled by the Operations Research community for some time, many fundamental problems remain challenging. Through its fourteen chapters, this book covers some new and some still challenging older problems which arise in the planning of telecommunication networks. Telecommunications Network Planning will benefit both telecommunications practitioners looking for efficient methods to solve their problems and operations researchers interested in telecommunications. The book examines network design and dimensioning problems;

it explores Operation Research issues related to a new standard Asynchronous Transfer Mode (ATM); it overviews problems that arise when designing survivable SDH/SONET Networks; it considers some broadband network problems; and it concludes with three chapters on wireless and mobile networks. Leading area researchers have contributed their recent research on the telecommunications and network topics treated in the volume.

The current Symbian Press list focuses very much on the small scale features of Symbian OS in a programming context. The Architecture Sourcebook is different. It's not a how-to book, it's a 'what and why' book. And because it names names as it unwinds the design decisions which have shaped the OS, it is also a 'who' book. It will show where the OS came from, how it has evolved to be what it is, and provide a simple model for understanding what it is, how it is put together, and how to interface to it and work with it. It will also show why design decisions were made, and will bring those deci-

sions to life in the words of Symbian's key architects and developers, giving an insider feel to the book as it weaves the "inside story" around the architectural presentation. The book will describe the OS architecture in terms of the Symbian system model. It will show how the model breaks down the system into parts, what role the parts play in the system, how the parts are architected, what motivates their design, and how the design has evolved through the different releases of the system. Key system concepts will be described; design patterns will be explored and related to those from other operating systems. The unique features of Symbian OS will be highlighted and their motivation and evolution traced and described. The book will include a substantial reference section itemising the OS and its toolkit at component level and providing a reference entry for each component.

The People's Republic of China has changed from a country which actively discouraged tourism into one of the major source markets for the international industry; the 35 million Chinese travelling across the border in 2005 are merely the tip of the iceberg. China's Outbound Tourism is the first book on this major development and has been written using a multitude of sources from China and around the world. The topic is approached from many angles, using methods from the fields of economics, political sciences, sociology and cross-cultural studies. The book explains the economic and social background of the surge in tourism and the changes in policy in the country since 1949, when it moved from prevention through controlled development to encouragement of outbound travels. Throughout the book, facts and figures are given for the global development as well as in-depth information about China's key destinations. The growing importance of tourists from China is however not just a question of quantity; the text explains the features which distinguish their travel motivations and behaviours from 'western' and Japanese tourists, and the consequences for product adaptation and marketing methods for destinations interested in attracting and satisfying Chinese tourists. Arlt's groundbreaking book cannot be ignored by professionals, academics and students of tourism and leisure; it offers fresh insight into the topic and indicates some of the future lines of development in this area.
