The 80-page study presents the results of a survey of 42 libraries with tablet lending programs or those just about to implement one. The report gives detailed data and commentary on how the programs were organized, financed and implemented and their impact on patrons and libraries. The report helps its readers to answer questions such as: how many tablets do libraries maintain for loan? Which brands do they prefer and which are they planning to purchase in the future? How much have they spent on their tablet lending programs

and plan to spend? Do they load their tablets with apps? If so how do they choose them? How many tablets are lost to theft? Or to negligence or accidents? What is the fine for overdue tablets? What is the length of the lending period? What are the circulation figures for tablets? What has been the impact on other library resources, such as a pre-existing laptop lending program? Or on use of the library's eBook collection? Which libraries do they view as models and what advice can they offer to peers? What services or training are offered to library patrons about how to use the tablets? Data in the report is broken out by library type (public library/public college/private college/special library), by size of library staff, and size of stock of tablet loaned and other variables.

This reference guide is designed to help educators better understand the value of assistive technology (AT) in increasing all students' access to the general education curriculum and improving the teaching/learning process for students with special needs. Written by Brian Friedlander, the guide shows educators how incorporating assistive technology can help them adhere to the principle of Universal Design for Learning (UDL) by enabling teachers to design lesson plans that include multiple means of representation, expression and engagement. When this is done, access to the curriculum for students with disabilities increases, lessons are more effective, and learning improves. Assistive Technology: What Every Educator Needs to Know answers both the "what" and "how" of assistive technology. It reviews the built-in accessibility features of Windows and OS X (Mac) operating systems, as well as the iOS (iPad), Android, and Chrome (Chromebooks) operating systems. It also recommends and describes specific software/apps for desktop and mobile devices that are designed to help build key skills in the areas of reading, writing, organization, and math.
