Get a clear, logical, and holistic approach to physical examination and health assessment across the lifespan! Using easy-to-follow language, detailed illustrations, summary checklists, and new learning resources Physical Examination and Health Assessment, 3rd Canadian Edition is the gold-standard in physical examination textbooks. This new edition reflects the latest in what is happening in nursing today with coverage of emerging trends, examples of how to document patient assessments using the Electronic Health Record, and new evidence-informed content throughout. It's easy to see why this text is #1 with Canadian nursing students! A two-column format distinguishes normal findings from abnormal findings, and uses colour, step-by-step photos to clarify examination techniques and expected findings. Sectional colour bars segment body systems according to content (Structure and Function, Subjective Data, Objective Data, Documentation and Critical Thinking, Abnormal Findings). Summary checklists offer reviews of key examination steps. Documentation and Critical Thinking sections provide real world clinical examples of specific patients and how to document assessment findings. Abnormal findings tables help you recognize, sort, and describe abnormalities. Separate chapter on Pregnancy provides a thorough foundation for assessing the pregnant patient. Developmental Considerations sections highlight content specific to infants, children, adolescents, pregnant women, and older adults. Promoting Health boxes focus on this key aspect of Canadian health care. NEW! Content covering the Electronic Health Record, charting, and narrative recording provides examples of how to document assessment findings. UPDATED Case Studies provide you with opportunities to test and develop your analytical skills and apply what you've learned. NEW! Approximately 150 normal and abnormal examination photos for the nose, mouth, throat, thorax, and pediatric assessment gives you a fresh perspective on these key system examinations, with cultural diversity and developmental variations. NEW! Social determinants of health considerations cover the shifting landscape of Canada's populations with strategies for integrating social, economic and ethnocultural diversity into your health assessments. NEW! Assessment strategies relevant to Indigenous populations, harm reduction, nutrition, and transgender persons inform practitioners on respectful, complete care.

Does a longer life mean a healthier life? The number of adults over 65 in the United States is growing, but many may not be aware that they are at greater risk from foodborne diseases and their nutritional needs change as they age. The IOM's Food Forum held a workshop October 29-30, 2009, to discuss food safety and nutrition concerns for older adults.

This volume is the newest release in the authoritative series issued by the National Academy of Sciences on dietary reference intakes (DRIs). This series provides recommended intakes, such as Recommended Dietary Allowances (RDAs), for use in planning nutritionally adequate diets for individuals based on age and gender. In addition, a new reference intake, the Tolerable Upper Intake Level (UL), has also been established to assist an individual in knowing how much is "too much" of a nutrient. Based on the Institute of Medicine's review of the scientific literature regarding dietary micronutrients, recommendations have been formulated regarding vitamins A and K, iron, iodine, chromium, copper, manganese, molybdenum, zinc, and other potentially beneficial trace ele-

ments such as boron to determine the roles, if any, they play in health. The book also: Reviews selected components of food that may influence the bioavailability of these compounds. Develops estimates of dietary intake of these compounds that are compatible with good nutrition throughout the life span and that may decrease risk of chronic disease where data indicate they play a role. Determines Tolerable Upper Intake levels for each nutrient reviewed where adequate scientific data are available in specific population subgroups. Identifies research needed to improve knowledge of the role of these micronutrients in human health. This book will be important to professionals in nutrition research and education.

NUTRITION & DIET THERAPY 11E is an updated introduction to the essentials of nutrition concepts, good health and client care that will provide you with a solid foundation in nutrition. This book addresses misconceptions presented in the media about the link between good nutrition and good health and will enable you to more effectively help your clients improve their nutrition and overall health. NUTRITION & DIET THERAPY 11E is organized around three simple concepts. Section One covers the fundamentals of nutrition, Section Two explains how to maintain good health through nutrition and Section Three addresses the nutrition therapy concepts nurses need to know. Dietary reference values (DRVs) for energy are based on estimating the total energy expenditure (TEE) for groups of people. TEE provides a measure of the energy requirement at energy balance i.e. when energy intake matches energy expenditure. The methodology to measure TEE - the doubly labelled water (DLW) method - has advanced and as a result, the evidence base on TEE in a wide variety of population groups has expanded considerably. With the high levels of overweight and obesity currently seen in the UK and the wealth of new data now available, it was considered timely for the Scientific Advisory Committee on Nutrition (SACN) to review recommendations for the UK population. This report details the evidence and approaches SACN has considered in order to update the DRVs for energy. SACN chose a prescriptive approach to estimating energy reference values; suitable reference body weight ranges consistent with long-term good health were used to calculate energy reference values. Thus, basal metabolic rate (BMR) values were predicted using healthy reference body weights. Using this approach, if overweight groups consume the amount of energy recommended for healthy weight groups, they are likely to lose weight, whereas underweight sections of the population should gain weight towards the healthy body weight range. SACN has derived new energy reference values. For most population groups, except for infants and young children, the values have increased. DRVs should be used to assess the energy requirements for large groups of people and populations, but should not be applied to individuals due to the large variation in physical activity and energy expenditure observed between people.

A proven philosophy for teaching lifetime fitness and wellness... "Health is available to Everyone for a Lifetime, and it's Personal." The relationship between nutrition and behaviour is bi-directional in nature, with nutritional factors able to affect activity and disposition, and behavior impacting diet and food intake. This book reviews these links, starting with their complex neurobiological basis, such as in the case of folate deficiency and cognitive decline. It also illustrates how behaviour may determine nutritional choices or status through peer modelling and poor dietary habits. Micronutrients and eating disorders are then critically addressed, with a review of current research methods and results, before extra-nutritional influencers on behaviour such as caffeine, herbal supplements and alcohol are discussed in the final section.

Fully updated, the Oxford Handbook of Nutrition and Dietetics, second edition is a practical quick-reference guide to nutrition in the prevention and treatment of disease and the maintenance of good health.

Presenting current research in an innovative text-reader format, Aging: Concepts and Controversies, Ninth Edition encourages students to become involved and take an informed stand on the major aging issues we face as a society. Not simply a summary of research literature, Harry R. Moody and Jennifer R. Sasser's text focuses on controversies and questions, rather than on assimilating facts or arriving at a single "correct" view about aging and older people. Drawing on their extensive expertise, the authors first provide an overview of aging in three domains: aging over the life course, health care, and the socioeconomic aspects of aging. Each section is followed by a series of edited readings, offering different perspectives from experts and specialists on that subject. New readings focus on whether current federal spending on the elderly is sustainable and fair to other groups, how older consumers are reshaping the business landscape, and the challenges of marketing and selling to customers 60 and over. More empha-

sis is placed on how social class and inequality earlier in life can shape our final years and the number of older Americans living in poverty. The section on Aging and Health Care has been thoroughly updated to reflect the latest data about chronic diseases that affect the elderly, government spending on health care, and policy changes to programs like Medicaid and Medicare. The section on the Social and Economic Outlook for an Aging Society gives the most current picture of the racial and ethnic diversity of older Americans, their participation in the labor force, and their income and wealth.

This new open access edition supported by the Fragility Fracture Network aims at giving the widest possible dissemination on fragility fracture (especially hip fracture) management and notably in countries where this expertise is sorely needed. It has been extensively revised and updated by the experts of this network to provide a unique and reliable content in one single volume. Throughout the book, attention is given to the difficult question of how to provide best practice in countries where the discipline of geriatric medicine is not well established and resources for secondary prevention are scarce. The revised and updated chapters on the epidemiology of hip fractures, osteoporosis, sarcopenia, surgery, anaesthesia, medical management of frailty, peri-operative complications, rehabilitation and nursing are supplemented by six new chapters. These include an overview of the multidisciplinary approach to fragility fractures and new contributions on pre-hospital care, treatment in the emergency room, falls prevention, nutrition and systems for audit. The reader will have an exhaustive overview and will gain essential, practical knowledge on how best to manage fractures in elderly patients and how to develop clinical systems that do so reliably.

This guideline provides updated global, evidence-informed recommendations on the intake of free sugars to reduce the risk of

NCDs in adults and children, with a particular focus on the prevention and control of unhealthy weight gain and dental caries. The recommendations in this guideline can be used by policy-makers and programme managers to assess current intake levels of free sugars in their countries relative to a benchmark. They can also be used to develop measures to decrease intake of free sugars,

where necessary, through a range of public health interventions. Examples of such interventions and measures that are already being implemented by countries include food and nutrition labelling, consumer education, regulation of marketing of food and non-alcoholic beverages that are high in free sugars, and fiscal policies tar-

geting foods and beverages that are high in free sugars. This guideline should be used in conjunction with other nutrient guidelines and dietary goals, in particular those related to fats and fatty acids (including saturated fatty acids and trans-fatty acids), to guide development of effective public health nutrition policies and programmes to promote a healthy diet.
