It's no wonder descriptions of riding often resemble the words of Asian mystics and Jedi knights: The ride causes your senses to open completely. You experience only the present, the now. Readers who prefer revving a Harley to meditating in a Zen garden know that biking is just as contemplative as chanting in the lotus position. Here, philosopher-bikers explore this seeming dichotomy, expounding on intriguing questions such as: Why are the motorcycles the real stars of Easy Rider? What would Marx and Foucault say about Harley

riders' tight leather garb? What's it like to live a dual life as a philosophy professor who wrenches his own 1965 Electra Glide? Would Jesus hang out in a biker bar or a coffeehouse? And more importantly, would He ride a Harley or a Honda? These witty, provocative essays give readers and riders a new appreciation of what it means to become one with the road.

In a recent National Highway Traffic Safety Administration (NHTSA) report, about one out of every 7 fatalities on the road involved a motorcycle. It is clear that motorcyclists are more vulnerable and much

more likely to be injured or killed in a crash than are passengers in a car accident. Motorcycle Accident Reconstruction purposefully pulls together as much of the relevant accident reconstruction literature and science as possible to present definitive literature that meets the needs of the crash reconstruction industry. The reader will learn to analyze physical evidence, understand what it means, and how to incorporate math and physics into an investigation. Topics featured in this book include: Case studies utilizing event data recorder data Photogrammetry analysis Determin-

ing motorcycle speed at the time of an accident. The book provides a unique roadmap for the motorcycle accident reconstructionist user. It is written by two specialists in this field who provide analyses of physical factors that affect motorcycle visibility, motorcycle usage at night, and human factors in motorcycle crashes - to the greater understanding of crash analysts, consultants and safety engineers alike.
