Presenting an alternate approach to supply chain management, *Lean Supply Chain Management Essentials: A Framework for Materials Managers* explains why the traditional materials planning environment, typically embodied by an Enterprise Resource

Planning (ERP) system, is an ineffective support system for a company that wants to adopt Lean practices. It begins by defining supply chain management basics, including roles, objectives, and responsibilities from a traditional framework. Next, it describes Lean basics and explores the conflicts between Lean and the traditional framework. The book focuses on the materials management aspects of Lean, such as leveling work into the value stream, heijunka scheduling, standard work, and the concept of intervals, including Every Part Every Interval (EPEI). By combining traditional materials management tools, such as Sales and Operations Planning (S&OP), with Lean manufacturing approaches and applying them to different manufacturing environments, the authors clarify the logic behind why you are doing what you're doing with Lean components and how they fit together as a system. Specifically, they explain how to: Determine which leveling strategy to use to smooth production Calculate interval to determine lot sizes in various production environments Apply Lean to purchasing, warehouse, and logistics areas Use your value

stream map for green initiatives and risk management Replace capacity planning and shop floor control with visual factory, operator balance charts, EPEI, and plan for every part Illustrating why balancing demand and capacity is better than trying to balance supply and demand, the book includes a definitive chart that matches Lean tools to the planning and control charts that have served as the model for ERP systems. It integrates the principles learned from Toyota's fifty-plus-year journey with Lean principles to provide the up-to-date understanding required to approach the application of Lean to your supply chain with a methodology that allows for experimentation, learning, and continuous improvement.

Japhug is a vulnerable Gyalrongic language, which belongs to the Trans-Himalayan (Sino-Tibetan) family. It is spoken by several thousand speakers in Mbarkham county, Rngaba district, Sichuan province, China. This grammar is the result of nearly 20 years of fieldwork on one variety of Japhug, based on a corpus of narratives and conversations, a large part of which is available from the Pangloss Collection. It covers the whole gram-

mar of the language, and the text examples provide a unique insight into Gyalrong culture. It was written with a general linguistics audience in mind, and

should prove useful not only to specialists of Trans-Himalayan historical linguistics and typologists, but also to anthropologists doing research in

Gyalrong areas. It is also hoped that some readers will use it to learn Japhug and pursue research on this fascinating language in the future.
