In the e-government research community as well as in many national e-gov-

ernment programs, interoperability is widely seen as a key factor in developing effective and attractive e-services. There is also agreement that interoperability encompasses not only mere technical standards and interfaces, but also includes organizational, legal, and cultural aspects. Several interoperability frameworks have been introduced on national and international levels, and recommendations have been made for the adaptation of enterprise architectures in the public sector. Common to all these approaches is their top-down deductive procedure, which does not connect very well to the real world of e-government projects. In contrast, in this volume, which is based on empirical research, the authors introduce a bottom-up inductive approach to deal with the challenges of interoperability-related governance. Based on so-called “good-practice” cases of interoperability in e-government, they derive concepts and classifications that help to uncover and assess similarities and differences between the cases. As a result, they present an empirically based conceptual framework that details the options for IT governance of

interoperability in government. In addition, their findings also make it possible to critically assess and improve other existing frameworks. With this work, which combines different thematic foci as well as a European and a US background the authors situate empirical results in the broader context of theoretical and political reflection. Thus they provide insights into strategic choices for CIOs in e-government at a national or regional level, experiences and lessons learned for managers and developers in e-government projects, and a huge set of empirical data for administrative and political scientists.

This book is meant for the new Relationship Managers (RM), Assistant Relationship Managers, Credit Analysts and trainees of banks working in the Corporate Banking units of banks to serve them as a reference guide for preparation of limit applications for approval. It would help them to understand various risks that can affect a company and also the post approval monitoring of the accounts. It provides an overview and is not meant to make the RM an expert on any industry or lending which comes from experience for which he will have to study the industries and develop himself. I have also included self-explanatory checklists that can be of help. As there could be

staff transferred from Personal Banking or Operations to the Corporate Units I have added a blank spreadsheet with definitions of some basic components and the products offered for ready reference. I have therefore kept it very simple to understand. When I worked in banks I had no reference book and had to pick up things on my own. That is what prompted me to write this book.
