Diaries are uncovered detailing the life and times of Richard Buchanan. He is an English Navy officer leading a gang of sailors through the blue water Caribbean to the grey of the Baltic. They wreak havoc on enemy shipping, pirates and those who act outside the law. Donating their prizes to the Crown they are welcomed back to the fold and entrusted with more missions. Finding intrigue, murder and romance along the way, will Richard ever settle down in his beloved South Shields?

The systems development environment; Identification and selection of development projects; Systems requirements determination; Modeling the processes and logic.

This is the ninth in the 300 series of circuit design books, again contains a wide range of circuits, tips and design ideas. The book has been divided into sections, making it easy to find related subjects in a single category. The book not only details DIY electronic circuits for home construction but also inspiring ideas for projects

you may want to design from the ground up. Because software in general and microcontroller programming techniques in particular have become key aspects of modern electronics, a number of items in this book deal with these subjects only. Like its predecessors in the 300 series, "308 Circuits" covers the following disciplines and interest fields of modern electronics: test and measurement, radio and television, power supplies and battery chargers, general interest, computers and microprocessors, circuit ideas and audio and hi-fi.

While expert systems technology originated in the United States, its development has become an international concern. Since the start of the DENDRAL project at Stanford University over 15 years ago, with its objective of problem-solving via the automation of actual human expert knowledge, significant expert systems projects have been completed in countries ranging from Japan to France, Spain to China. This book presents a sample of five such projects, along with four substantial reports of mature studies from North American researchers. Two important issues of expert system design permeate the papers in this volume. The first concerns the incorporation of substantial numeric knowledge into a system. This has become a significant focus of work as researchers have sought to apply expert systems technology to complex, real-world domains already subject to statistical or algebraic description (and handled well at some level in numeric terms). A second prominent issue is that of representing control knowledge in a manner which is both explicit, and thus available for inspection, and compatible with the semantics of the problem domain.

Technology Transfer brings together for the first time research from group, organizational, media and interpersonal communication perspectives. The central topics considered include: } identification and definition of technology transfer } organization to enhance technology transfer } the roles of universities, government and industry in the technology transfer environment } the distinctive elements of the communication process in technology transfer

E-Business has become a fact for almost all companies. But what are the key technologies for economically successful e-commerce? In this book readers will find all concepts that will coin tomorrow's e-business: virtual sales assistants (shopbots), personalized web pages, electronic market places, vendor managed inventory, virtual organizations, supply chain management. Both technical and economic issues of these concepts are discussed in detail. Leading-edge real world applications are presented that will shape e-business mid-term. This book is a must-read for managers or technical consultants as well as researchers needing in-depth information for strategic business decisions.

Travel Back to a Time of Innocence and Adventure "Until Kirby Mellen was ten nothing very exciting had ever happened to him or his father or his mother or his little sister Bitsy." All of this changes very suddenly with the death of far-distant Uncle Hiram, who leaves his Florida motel-painted pink-to Kirby's mom. People like the Mellens, from Minnesota, do not paint their buildings pink. And these seven buildings are not just quietly pink-they are outrageously PINK. "It was pinker than Kirby's necktie or Bitsy's

hair ribbon. It was pink, pink, PINK." It isn't long after the Mellens arrive at the motel that things go even more off kilter with regulars (and some irregulars) taking up residence in the cottages. There's old Miss Ferry who talks to crabs and other beach creatures, Marvello the magician, the two gangsters Locke and Black, and jolly Mr. Carver, who has a knack for uncovering the secrets left by Uncle Hiram. Carol Ryrie Brink's classic children's tale evokes a time of innocence and adventure in the lives of the Mellen children and their friends. Written long before the introduction of the internet, it speaks of people solving problems through understanding and coming together. With delightful illustrations by Sheila Greenwald, this story will capture the imagination of children of all ages.

Data mining deals with finding patterns in data that are by user-definition, interesting and valid. It is an interdisciplinary area involving databases, machine learning, pattern recognition, statistics, visualization and others. Decision support focuses on developing systems to help decision-makers solve problems. Decision support provides a selection of data analysis, simulation, visualization and modeling techniques, and software tools such as decision support systems, group decision support and mediation systems, expert systems, databases and data warehouses. Independently, data mining and decision support are well-developed research areas, but until now there has been no systematic attempt to integrate them. *Data Mining and Decision Support: Integration and Collaboration*, written by leading researchers in the field, presents a conceptual framework, plus the methods and tools for integrating the two disciplines and for applying this technology to business problems in a collaborative setting.
