Making Managed Healthcare Work is your comprehensive guide to developing and implementing a new strategic approach to managed care that's practical, performance-based, and results-oriented. Learn how to prepare for, identify, pursue, negotiate and implement a new type of managed care arrangement that can accomplish the objective of delivering quality care at competitive prices.

The authors found that for the average adult beneficiary, costs to the government were 9 percent higher with CRI. Compared to the non-CRI program, costs were 57 percent higher for Prime enrollees, whereas they were the same for non-enrollees. Prime enrollees' use of outpatient care accounted for almost all of the utilization increase in CRI. Active-duty spouses who enrolled did not change their military treatment facility (MTF) use, but they were more likely to augment their (MTF) care with civilian care. Retired enrollees were more likely to use both MTF care and civilian care. CHAMPUS inpatient utilization was lower in CRI, as is often the case in managed-care programs, whereas use of MTF inpatient services did not change significantly. These findings suggest that CRI was able to increase access, especially to civilian care, with an accompanying increase in costs. The evidence points to high utilization among Prime enrollees, especially for retired beneficiaries.
