Paper, board and pulps — Standard atmosphere for conditioning and testing and procedure for monitoring the atmosphere and conditioning of samples

One interesting method of testing the pH of a liquid uses red cabbage juice as a pH indicator. When the cabbage juice is mixed with different liquids, the solution changes color thanks to a pigment in red cabbage called flavin – an anthocyanin. If the color changes to pink, the pH is 1 to 2. If the color becomes dark red, the pH is 3 to 4.

SGS-IPS Testing’s paper testing laboratory performs a wide range of physical and analytical tests that are specific to the industry. Our lab performs ISO, ASTM, and TAPPI methods for all pulp, paper, tissue, and paperboard testing, including physical, optical, and thermal coating properties as well as printability testing.

It can be run from either the back side or the coated side of the paper. Each test evaluates a different property of the paper. The test run from the back side measures the base sheet sizing. The test run from the coated side responds to the “openness” of the coating. This method is less frequently used.
