SCIENCE AND EMPIRES: FROM THE INTERNATIONAL COLLOQUIUM TO THE BOOK Patrick PETITJEAN, Catherine JAMI and Anne Marie MOULIN The International Colloquium "Science and Empires - Historical Studies about Scientific Development and European Expansion" is the product of an International Colloquium, "Sciences and Empires - A Comparative History of Scientific Exchanges: European Expansion and Scientific Development in Asian, African, American and Oceanian Countries". Organized by the REHSEIS group (Research on Epistemology and History of Exact Sciences and Scientific Institutions) of CNRS (National Center for Scientific Research), the colloquium was held from 3 to 6 April 1990 in the UNESCO building in Paris. This colloquium was an idea of Professor Roshdi Rashed who initiated this field of studies in France some years ago, and proposed "Sciences and Empires" as one of the main research programmes for the The project to organize such a colloquium was a bit REHSEIS group. of a gamble. Its subject, reflected in the title "Sciences and Empires", is not a currently-accepted sub-discipline of the history of science; rather, it refers to a set of questions which found autonomy only recently. The terminology was strongly debated by the participants and, as is frequently suggested in this book, awaits fuller clarification.

From the first Arab-Islamic Empire of the mid-seventh century to the Ottomans, the last great Muslim empire, the story of the Middle East has been the story of the rise and fall of universal empires and, no less important, of imperialist dreams. So argues Efraim Karsh in this highly provocative book. Rejecting the conventional Western interpretation of Middle Eastern history as an offshoot of global power politics, Karsh contends that the region's experience is the culmination of long-existing indigenous trends, passions, and patterns of behavior, and that foremost among these is Islam's millenarian imperial tradition. The author explores the history of Islam's imperialism and the persistence of the Ottoman imperialist dream that outlasted World War I to haunt Islamic and Middle Eastern politics to the present day. September 11 can be seen as simply the latest expression of this dream, and such attacks have little to do with U.S. international behavior or policy in the Middle East, says Karsh. The House of Islam's war for world mastery is traditional, indeed venerable, and it is a quest that is far from over.

Rufus of Ephesus' treatise *On Melancholy* represents perhaps the most influential medical monograph from the late first century AD, since his notion of melancholy links two diverse aspects: black bile as a cause for madness and depression and as a sign of intellectual genius. Rufus combines concepts of melancholy developed in the Aristotelian philosophy with concepts of famous physicians such as Hippocrates and Diocles. His ideas strongly influenced subsequent generations of physicians, and especially Galen, and dominated discourses on the topic during the Middle Ages and the Renaissance. Moreover, the reception of Rufus' concepts was not limited to the Western world; in medieval Muslim culture, in particular, his work enjoyed great fame and favor, and many intellectuals

read it eagerly. In this volume, the Greek, Latin and Arabic fragments of this work, lost in the original, have been collected for the first time. Arabic sources in particular yield hitherto unknown fragments, thus allowing for new interpretations of this work. The English introduction, translation and commentary reconstruct the main arguments of this important treatise, enabling the interested scholar to obtain easy access to it. Leading scholars contributed interpretative essays which investigate Rufus and his ideas about melancholy in antiquity, the Middle Ages, the Renaissance and the early modern period from different vantage points, including history, philosophy, literature, art history and psychiatry. Presents a collection of essays, manifestos, and illustrations that provide an overview of the Dada movement in art, describing its convictions, antics, and spirit, through the words and art of its principal practitioners.

Decolonizing Anarchism examines the history of South Asian struggles against colonialism and neocolonialism, highlighting lesser-known dissidents as well as iconic figures. What emerges is an alternate narrative of decolonization, in which liberation is not defined by the achievement of a nation-state. Author Maia Ramnath suggests that the anarchist vision of an alternate society closely echoes the concept of total decolonization on the political, economic, social, cultural, and psychological planes. *Decolonizing Anarchism* facilitates more than a reinterpretation of the history of anticolonialism; it also supplies insight into the meaning of anarchism itself. Praise for *Decolonizing Anarchism*: "Maia Ramnath offers a refreshingly different perspective on anticolonial movements in India, not only by focusing on little-remembered anarchist exiles such as Har Dayal, Mukerji and Acharya but more important, highlighting the persistent trend that sought to strengthen autonomous local communities against the modern nation-state. A superbly original book."—Partha Chatterjee, author of *Lineages of Political Society: Studies in Post-colonial Democracy* "[Ramnath] audaciously reframes the dominant narrative of Indian radicalism by detailing its explosive and ongoing symbiosis with decolonial anarchism."—Dylan Rodríguez, author of *Suspended Apocalypse: White Supremacy, Genocide, and the Filipino Condition*

Sennacherib had evidently long since made up his mind as to the manner in which Babylonian pride was to be handled. He did not take the hand of Marduk as viceroy, but he had himself proclaimed king of Babylon, and and this without using a second name as Tiglath-pileser had done. Nor does he seem to have taken the trouble to honor Marduk by calling on him in his temple. --from Chapter 2 Sennacherib, the great king, the mighty king, king of the universe, king of Assyria, king of the four quarters; the shepherd, favorite of the great gods, guardian of the right, lover of justice; who lends support, who comes to the aid of the needy, who turns to pious deeds; . . . the god Assur, the great mountain, an unrivaled kingship has entrusted to me, and above all those who dwell in palaces, has made powerful my weapons; from the upper sea of the setting sun to the lower sea of the rising sun, all the black-headed race he has brought in submission at my feet and mighty kings feared my warfare. --from the Oriental Institute Prism

Dual specificity phosphatases (DUSPs) constitute a heterogeneous group of protein tyrosine phosphatases with the ability to dephosphorylate Ser/Thr and Tyr residues from proteins, as well as from other non-proteinaceous substrates including signaling lipids. DUSPs include, among others, MAP kinase (MAPK) phosphatases (MKPs) and small-size atypical DUSPs. MKPs are enzymes specialized in regulating the activity and subcellular location of MAPKs, whereas the function of small-size atypical DUSPs seems to be more diverse. DUSPs have emerged as key players in the regulation of cell growth, differentiation, stress response, and apoptosis. DUSPs regulate

essential physiological processes, including immunity, neurobiology and metabolic homeostasis, and have been implicated in tumorigenesis, pathological inflammation and metabolic disorders. Accordingly, alterations in the expression or function of MKPs and small-size atypical DUSPs have consequences essential to human disease, making these enzymes potential biological markers and therapeutic targets. This Special Issue covers recent advances in the molecular mechanisms and biological functions of MKPs and small-size atypical DUSPs, and their relevance in human disease.

Medieval Arabic Historiography is concerned with social contexts and narrative structures of pre-modern Islamic historiography written in Arabic in seventh and thirteenth-century Syria and Egypt. Taking up recent theoretical reflections on historical writing in the European Middle Ages, this extraordinary study combines approaches drawn from social sciences and literary studies, with a particular focus on two well-known texts: Abu Shama's *The Book of the Two Gardens*, and Ibn Wasil's *The Dissipater of Anxieties*. These texts describe events during the life of the sultans Nur-al-Din and Salah al-Din, who are primarily known in modern times as the champions of the anti-Crusade movement. Hirschler shows that these two authors were active interpreters of their society and has considerable room for manoeuvre in both their social environment and the shaping of their texts. Through the use of a fresh and original theoretical approach to pre-modern Arabic historiography, Hirschler presents a new understanding of these texts which have before been relatively neglected, thus providing a significant contribution to the burgeoning field of historiographical studies.

In two places in the First Gospel (Matt 10:5b-6; 15:24) the Messianic mission of Jesus and his disciples is limited to a group called 'the lost sheep of the house of Israel'. In light of Matthew's intense interest in Jesus' Davidic Messiahship and the Jewish Shepard-King traditions surrounding King David it is argued that the 'lost sheep of the house of Israel' refers to remnants of the former northern kingdom of Israel who continued to reside in the northern region of the ideal Land of Israel.

Hands-on text for a first course aimed at end-users, focusing on concepts, practical issues and problem solving.

A fast-paced narrative history of the coups, revolutions, and invasions by which the United States has toppled fourteen foreign governments -- not always to its own benefit "Regime change" did not begin with the administration of George W. Bush, but has been an integral part of U.S. foreign policy for more than one hundred years. Starting with the overthrow of the Hawaiian monarchy in 1893 and continuing through the Spanish-American War and the Cold War and into our own time, the United States has not hesitated to overthrow governments that stood in the way of its political and economic goals. The invasion of Iraq in 2003 is the latest, though perhaps not the last, example of the dangers inherent in these operations. In *Overthrow*, Stephen Kinzer tells the stories of the audacious politicians, spies, military commanders, and business executives who took it upon themselves to depose monarchs, presidents, and prime ministers. He also shows that the U.S. government has often pursued these operations without understanding the countries involved; as a result, many of them have had disastrous long-term consequences. In a compelling and provocative history that takes readers to fourteen countries, including Cuba, Iran, South Vietnam, Chile, and Iraq, Kinzer surveys modern American history from a new and often surprising perspective. "Detailed, passionate and convincing . . . [with] the pace and grip of a good thriller." -- Anatol Lieven, *The New York Times Book Review*

The global crisis the automotive industry has slipped into over the second half of 2008 has set a fierce spotlight not only on which cars are the right ones to bring to the market but also on how these cars are developed. Be it OEMs developing new models, suppliers integrating themselves deeper into the development processes of different OEMs, analysts estimating economical risks and opportunities of automotive investments, or even governments creating and evaluating scenarios for financial aid for suffering automotive companies: At the end of the day, it is absolutely indispensable to comprehensively understand the processes of automotive development – the core subject of this book. Let's face it: More than a century after Carl Benz, Wilhelm Maybach and Gottlieb Daimler developed and produced their first motor vehicles, the overall concept of passenger cars

has not changed much. Even though components have been considerably optimized since then, motor cars in the 21st century are still driven by combustion engines that transmit their propulsive power to the road surface via gearboxes, transmission shafts and wheels, which together with spring-damper units allow driving stability and ride comfort. Vehicles are still navigated by means of a steering wheel that turns the front wheels, and the required control elements are still located on a dashboard in front of the driver who operates the car sitting in a seat.

The new edition has been completely revised and updated and includes new chapters on basic quantitative methods, measuring survival, measurement scales, diagnostic testing, bayesian methods, meta-analysis and systematic reviews. mani, Surgical Registrar, South London Healthcare HHS Trust, UK

1 Plantation forests and biodiversity: Oxymoron or opportunity? Forests form the natural vegetation over much of the Earth's land, and they are critical for the survival of innumerable organisms. The ongoing loss of natural forests, which in some regions may have taken many millennia to develop, is one of the main reasons for the decline of biodiversity. Preventing the further destruction of forests and protecting species and ecosystems within forests have become central issues for environmental agencies, forest managers, and governments. In this difficult task science has an important role in informing policy and management as to how to go about this. So how do industrial and other plantation forests fit into this? Plantation forests, comprised of rows of planted trees that may be destined for pulp or sawmills after only a few years of growth, appear to have little to contribute to the conservation of biodiversity. Yet there is more to this than meets the eye (of the casual observer), and there are indeed numerous opportunities, and often untapped potential, for biodiversity conservation in plantation forestry. With plantation forests expanding at a rate of approximately three million hectares per year, it is crucial to understand how plantations can make a positive contribution to biodiversity conservation and how the potentially negative impacts of this land use can be minimised. That is the topic of this book.
