This textbook addresses the themes that are at the forefront of neonatal clinical care and research, based on natural divisions in care during pregnancy, and post-natally by gestational age at birth. The book offers a unique approach, in that it proposes discussion of important general principles underpinning neonatal care

that are not addressed in most general neonatology textbooks, such as ethical issues, counselling, effective training methods, quality and safety, among other subjects. These are fundamental aspects and challenges that need to be appreciated by senior clinicians. A chapter authored by parents describing their perspectives of neonatal intensive care is unique and will be highly educational, with the potential to influence the way in which individuals view and deliver neonatal care. The authors discuss common and important conditions, to promote adoption of sound evidenced based practice where this is available. However, where evidence is limited, as is the case in many areas of neonatal practice, the authors aim to encourage critical thinking and evidence appraisal, which are necessary skills for busy clinicians wishing to filter evidence to guide delivery of care. This text is suitable for senior trainees wishing to pursue a career in neonatal medicine, early career neonatologists and paediatricians with an interest in neonatology. It is also of interest to established neonatologists wishing to update their neonatal knowledge. The con-

tent is based on the RCPCH Level 3 curriculum, and addresses important topical and/or controversial aspects of neonatal care.

This Intergovernmental Panel on Climate Change Special Report (IPCC-SREX) explores the challenge of understanding and managing the risks of climate extremes to advance climate change adaptation. Extreme weather and climate events, interacting with exposed and vulnerable human and natural systems, can lead to disasters. Changes in the frequency and severity of the physical events affect disaster risk, but so do the spatially diverse and temporally dynamic patterns of exposure and vulnerability. Some types of extreme weather and climate events have increased in frequency or magnitude, but populations and assets at risk have also increased, with consequences for disaster risk. Opportunities for managing risks of weather- and climate-related disasters exist or can be developed at any scale, local to international. Prepared following strict IPCC procedures, SREX is an invaluable assessment for anyone interested in climate extremes, environmental disasters and adaptation to climate change, including policymakers, the private sector and academic researchers.

It's no secret that certain social groups have predominated India's business and trading history, with business traditionally being the preserve of particular 'Bania' communities. However, the past four or so decades have seen a widening of the social base of Indian capital, such that the social profile of Indian business has expanded beyond recognition, and entrepreneurship and commerce in India are no longer the exclusive bastion of the old mercantile castes. In this meticulously researched book - acclaimed for being the first social history to document and understand India's new en-

trepreneurial groups – Harish Damodaran looks to answer who the new ‘wealth creators’ are, as he traces the transitional entry of India’s middle and lower peasant castes into the business world. Combining analytical rigour with journalistic flair, India’s New Capitalists is an essential read for anyone seeking to understand the culture and evolution of business in contemporary South Asia. Since process models are nowadays ubiquitous in many applications, the challenges and alternatives related to their development, validation, and efficient use have become more apparent. In addition, the massive amounts of both offline and online data available today open the door for new applications and solutions. However, transforming data into useful models and information in the context of the process industry or of bio-systems requires specific approaches and considerations such as new modelling methodologies incorporating the complex, stochastic, hybrid and distributed nature of many processes in particular. The same can be said about the tools and software environments used to describe, code, and solve such models for their further exploitation. Going well beyond mere simulation tools, these advanced tools offer a software suite built around the models, facilitating tasks such as experiment design, parameter estimation, model initialization, validation, analysis, size reduction, discretization, optimization, distributed computation, co-simulation, etc. This Special Issue collects novel developments in these topics in order to address the challenges brought by the use of models in their different facets, and to reflect state of the art developments in methods, tools and industrial applications.

In 2000, HUD, in recognition that any solution to homelessness must emphasize housing, targeted its McKinney-Vento Act homeless competitive programs towards housing activities. This policy decision presumed that programs such as Medicaid, TANF and General Assistance could pick up the slack produced by the change. This study examines how 7 communities sought to improve homeless people's access to mainstream services following this shift away from funding services through the Supportive Housing Program. Provides communities with models and strategies that they can use.

Highlights the limits of what even the most resourceful of communities can do to enhance service and benefit access by homeless families and individuals.

The design and analysis of efficient data structures has long been recognized as a key component of the Computer Science curriculum. Goodrich, Tomassia and Goldwasser's approach to this classic topic is based on the object-oriented paradigm as the framework of choice for the design of data structures. For each ADT presented in the text, the authors provide an associated Java interface. Concrete data structures realizing the ADTs are provided as Java classes implementing the interfaces. The Java code implementing fundamental data structures in this book is organized in a single Java package, `net.datastructures`. This package

forms a coherent library of data structures and algorithms in Java specifically designed for educational purposes in a way that is complimentary with the Java Collections Framework.

Each year, more than 33 million Americans receive health care for mental or substance-use conditions, or both. Together, mental and substance-use illnesses are the leading cause of death and disability for women, the highest for men ages 15-44, and the second highest for all men. Effective treatments exist, but services are frequently fragmented and, as with general health care, there are barriers that prevent many from receiving these treatments as designed or at all. The consequences of this are serious—for these individuals and their families; their employers and the workforce; for the nation's economy; as well as the education, welfare, and justice systems. Improving the Quality of Health Care for Mental and Substance-Use Con-

ditions examines the distinctive characteristics of health care for mental and substance-use conditions, including payment, benefit coverage, and regulatory issues, as well as health care organization and delivery issues. This new volume in the Quality Chasm series puts forth an agenda for improving the quality of this care based on this analysis. Patients and their families, primary health care providers, specialty mental health and substance-use treatment providers, health care organizations, health plans, purchasers of group health care, and all involved in health care for mental and substance-use conditions will benefit from this guide to achieving better care. This book provides a path for resolving challenges related to access, diversity, equity, and other issues facing higher education admissions. It illuminates current higher education admissions practices in a global context, highlighting common obstacles. The chapters outline decision-making models used in college admissions, details those assessments commonly employed in admissions, and provides innovative perspectives on the future of admissions. The book's multidisciplinary approach defines much-needed changes in admissions brought about by shifts in the makeup of student populations and in higher education itself. Rationales for moving away from traditional assessments used in admissions and expanding the criteria used to ensure a student's academic success are discussed. Readers will come away with an understanding of the current issues, philosophies, and historical circumstances facing higher education admissions across the globe and will be equipped to contemplate and react to future possibilities

and opportunities.
