20AZOD - ALEX NEIL

Seven (7) characteristics of plantation agriculture.

A plantation is the large-scale estate meant for farming that specializes in cash crops. The crops that are grown include cotton, coffee, tea, cocoa, sugar cane, sisal, oil seeds, oil palms, rubber trees, and fruits. Protectionist policies and natural comparative advantage have sometimes contributed to determining where plantations were located.

Plantation Agriculture: Location and Characteristics (with ...

(g) Plantation farming is not good for ecology. Over-exploitation and absence of crop-rotation depletes soil fertility and increases soil erosion. (h) As most of the owners of plantation estates reside outside the country—particularly at the initial stage of development—they have very little interest in the development of the region.

Plantations in the American South - Wikipedia

The typical plantation was a self-sustained community, an economic and political institution governed with a monopoly of authority by the planter. Plantation crops were determined by soil and climate, with tobacco, cotton, rice, indigo, and sugarcane, for example, each predominating in a certain zone of the southeastern colonies of North America.

Plantation crops Crops cultivated on antebellum plantations included cotton , tobacco , sugar , indigo , rice , and to a lesser extent okra , yam , sweet potato , peanuts , and watermelon . By the late 18th century, most planters in the Upper South had switched from exclusive tobacco cultivation to mixed-crop production.
