The next three principles focus on evaluation criteria. These include establishing consistent evaluation criteria, developing common performance measurements and considering all relevant monetary and non-monetary criteria. The final two principles focus on analysis. These include weighing risks against potential rewards and performance monitoring.

Engineering economics, previously known as engineering economy, is a subset of economics concerned with the use and "...application of economic principles" in the analysis of engineering decisions. As a discipline, it is focused on the branch of economics known as microeconomics in that it studies the behavior of individuals and firms in making decisions regarding the allocation of limited resources. Thus, it focuses on the decision making process, its context and environment. It is pragmatic by

Principle 5: Consider All relevant Criteria The decision maker will normally select the alternative that will best serve the long-term

interests of the owners of the organization. In engineering economic analysis, the primary criterion relates to the long-term financial interests of the owners. This is based on the assumption that available capital will be allocated to provide maximum monetary return to the owners. Often, though, there are other organizational objectives you would like to ...
