The Development of a Regional Industrial Complex

Selected publications :
Mick Dunford : University of Sussex
We would like to show you a description here but the

site won't allow us. Ports are becoming increasingly regional in their dynamics, which represents a new development from their traditional local function, namely as industrial complexes. For instance, the port of Hong Kong owes its wealth to its natural site and its geographical position of a transit harbor for southern China.

REGIONAL DEVELOPMENT PLANNING - ISSUES AND REALITIES

6.3 - Port Terminals | The Geography of Transport Systems

Port and industrial complex is a powerful source of development, basis of investment potential of the coastal zone. In the context of globalization, competitive advantages disappear on the basis of production factors; the development degree of all types of infrastructure comes to the foreground as an important factor of investment attractiveness (Kuznetsova, 2010).

Europe's Industrial Cluster | Port of Rotterdam
Regional development is the cumulative effect of a complex system of interacting development process influenced or

controlled by governmental and non-governmental interventions and by collective and individual decisions made at the local, the central, and the intermediate (regional) level.

development of a regional/industrial complex are: goal setting and evaluation under conditions of changing human values and objectives; identification of growth patterns (maximum productivity, minimum pollution, resource conservation); elaboration of economic and social strategies for the transition from the present mode of growth to the future pattern; Shipping has an environmental impact both in ports, as well as in the immediate vicinity of the ports. Examples of these impacts are noise from ship engines and machinery used for loading and unloading, exhausts of particles, CO₂, NO_x and SO₂ from the ship's main and auxiliary engines, and dust from the handling of substances such as grain, sand and coal.
