It comprises case studies on infant and young child observation, research papers, and articles focusing on wider applications of the psychoanalytic observational method, including its relevance to...

At about 11:30AM the child had a light snack of a banana and a bottle of apple juice. Nevertheless he already has enough teeth to bite and chew properly; he constantly tried to suckle it with his lips. May be it was a kind of a game for him or his suckling reflex hadn't been fulfilled yet.

The observation model was an adjusted version of the Tavistock Model for studying infants. The original model observes a baby, an hour a week for the first one or two years of life, within the family home (Fawcett 2009). The observer does not take notes, as it allows them to notice all behaviours, movements and expressions of the child.
