From the #1 New York Times bestselling author of *The Da Vinci Code*, *Angels & Demons*, and *Inferno* and the “master of smart thrills” (People) comes a “rocket-fast thriller” (Vince Flynn) about an astonishing NASA discovery that unravels a deadly conspiracy that leads all the way to the White House. When a NASA satellite spots evidence of an astoundingly rare object buried deep in the Arctic ice, the floundering space agency proclaims a much-needed victory—one that could have profound implications for US space policy and the impending presidential

election. With his re-election hanging in the balance, the President sends White House Intelligence analyst Rachel Sexton to the Milne Ice Shelf to verify the authenticity of the find. Accompanied by a team of experts, including the charismatic academic Michael Tolland, Rachel uncovers the unthinkable: evidence of scientific trickery. Before she can contact the President, she and Michael are attacked by a deadly team of assassins controlled by a mysterious power broker who will stop at nothing to hide the truth. Fleeing for their lives in an environment as desolate as it is lethal, their only hope for survival is to find out who is behind this masterful

ploy. The truth, they will learn, is the most shocking deception of all in this “taut, fast-paced, barn-burner of a book” (St. Petersburg Times).

How to use design as a tool to create not only things but ideas, to speculate about possible futures. Today designers often focus on making technology easy to use, sexy, and consumable. In *Speculative Everything*, Anthony Dunne and Fiona Raby propose a kind of design that is used as a tool to create not only things but ideas. For them, design is a means of speculating about how things could be—to imagine possible futures. This is not the usual sort of predicting or forecasting, spotting trends and extrapolating; these kinds of predictions have been proven wrong, again and again. Instead, Dunne and Raby pose “what if” questions that are intended to open debate and discussion about the kind of future people want (and do not want). *Speculative Everything* offers a tour through an emerging cultural landscape of design ideas, ideals, and approaches. Dunne and Raby cite examples from their own design and teaching and from other projects from

fine art, design, architecture, cinema, and photography. They also draw on futurology, political theory, the philosophy of technology, and literary fiction. They show us, for example, ideas for a solar kitchen restaurant; a flypaper robotic clock; a menstruation machine; a cloud-seeding truck; a phantom-limb sensation recorder; and devices for food foraging that use the tools of synthetic biology. Dunne and Raby contend that if we speculate more—about everything—reality will become more malleable. The ideas freed by speculative design increase the odds of achieving desirable futures.

The Sumerians, the pragmatic and gifted people who preceded the Semites in the land first known as Sumer and later as Babylonia, created what was probably the first high civilization in the history of man, spanning the fifth to the second millenniums B.C. This book is an unparalleled compendium of what is known about them. Professor Kramer communicates his enthusiasm for his subject as he outlines the history of the Sumerian civilization and describes their cities, religion, literature, education, scientific achieve-

ments, social structure, and psychology. Finally, he considers the legacy of Sumer to the ancient and modern world. “There are few scholars in the world qualified to write such a book, and certainly Kramer is one of them. . .

. . . One of the most valuable features of this book is the quantity of texts and fragments which are published for the first time in a form available to the general reader. For the layman the book provides a readable and up-to-date introduction to a most fascinating culture. For the specialist it presents a synthesis with which he may not agree but from which he will nonetheless derive stimulation.”—*American Journal of Archaeology*
“An uncontested authority on the civilization of Sumer, Professor Kramer writes with grace and urbanity.”—*Library Journal*

Cuneiform records made some three thousand years ago are the basis for this essay on the ideas of death and the afterlife and the story of the flood which were current among the ancient peoples of the Tigris-Euphrates Valley. With the same careful scholarship shown in his previous volume, *The Babylonian Genesis*, Heidel interprets the famous Gilgamesh Epic and other related Babylonian and Assyrian documents. He compares them with corresponding portions of the Old Testament in order to determine the inherent historical relationship of Hebrew and Mesopotamian ideas. In the course of their investigations into Leonardo da Vinci and the Turin Shroud, Lynn Picknett and Clive Prince found clues in the work of the great Renaissance artist that pointed to the existence of a secret underground religion. More clues were found in a twentieth-century London church. These were the beginnings of a quest through time and space that led the authors into

the mysterious world of secret societies and such bodies as the Freemasons, the Knights Templar and the Cathars and finally back to the ideas and beliefs of the first century AD and a devastating new view of the real character and motives of the founder of Christianity and the roles of John the Baptist and Mary Magdalene. They reveal nothing less than a secret history, preserved through the centuries but encoded in works of art and even in the great Gothic cathedrals, whose revelation could shake the foundations of the Church.

Since the Chinese translation of *The Da Vinci Code* was released in China in 2004, the "Dan Brown Craze" has swept across the country. All of Brown's novels have subsequently been translated into Chinese and sold millions of copies. No living foreign writer has generated so much media coverage and scholarship in China within such a short period of time; not even Toni Morrison or J.K. Rowling. Brown's rendering of dichotomies, such as science and religion, humanity and divinity, good and evil, and liberty and privacy, resonates well with his Chinese readers because they feel that these issues

are no longer irrelevant to them. They see an urgent need for a revision, if not an entire redefinition, of their existing beliefs and values. This book examines the plot, characterization, themes, setting, codes, knowledge, institutions, and techniques in his novels, and delivers a careful textual analysis, a selective dissemination of relevant information on different subjects, and a perceptive comparison between Brown and other Chinese and Western writers. As such, it shows how his thrillers have been appreciated and studied in China, and what kinds of discoveries, challenges, controversies, and insights have surfaced in the Chinese appreciation of Brown's novels. Furthermore, the book explores why the "Dan Brown Craze" has lasted this long and exerted a broad and far-reaching impact upon the reading, writing, studying, translating, publishing, and marketing of fiction in China.

Surveys the online social habits of American teens and analyzes the role technology and social media plays in their lives, examining common misconceptions about such topics as identity, privacy, danger, and bullying. Something fishy is going

on in the world of artistic scholarship. How can there possibly be a link between the hidden cod of Leonardo Da Vinci's paintings and the over fishing of the North Atlantic fish stocks? Could it be that Leonardo Da Vinci, the greatest genius of his age and inventor of the photocopier and mouse mat, had a chilling insight into European Union Fishing policies. Only one man can find out. Robert Langdon, international scholar, master spy and action hero. Oh and Bezu Fish. Building on the influential book *The Social Construction of Technological Systems*, this volume carries forward the project of creating a theory of technological development and implementation that is strongly grounded in both sociology and history. Technology is everywhere, yet a theory of technology and its social dimension remains to be fully developed. Building on the influential book *The Social Construction of Technological Systems*, this volume carries forward the project of creating a theory of technological development and implementation that is strongly grounded in both sociology and history. The 12 essays address the central question of how tech-

nologies become stabilized, how they attain a final form and use that is generally accepted. The essays are tied together by a general introduction, part introductions, and a theoretical conclusion. The first part of the book examines and criticizes the idea that technologies have common life cycles; three case studies cover the history of a successful but never produced British jet fighter, the manipulation of patents by a French R&D company to gain a market foothold, and the managed development of high-intensity fluorescent lighting to serve the interests of electricity suppliers as well as the producing company. The second part looks at broader interactions shaping technology and its social context: the question of who was to define "steel," the determination of what constitutes radioactive waste and its proper disposal, and the social construction of motion pictures as exemplified by Thomas Edison's successful development of the medium and its commercial failure. The last part offers theoretical studies suggesting alternative approaches to sociotechnologies; two studies argue for a strong sociotechnology in which

artifact and social context are viewed as a single seamless web, while the third looks at the ways in which a social program is a technology.

Robert Langdon is called upon to identify a mysterious symbol seared onto a dead man's chest. It belongs to the Illuminati, a secret brotherhood with a vendetta against the Catholic Church. Symbolologist Robert Lang-

don returns in this new thriller follow-up to *The Da Vinci Code*.

"If the name Langdon sounds familiar, it's because Dan Brown named the intrepid protagonist of *The Da Vinci Code* and *Angels & Demons* after ambigram- and symbol-designer John Langdon. Widely recognized as a master of the art of the ambigram form, John Langdon does with words what M.C. Escher and Salvador Dali did with images. An ambigram is where language, science, philosophy and illusion come together in the design of a word which is manipulated to create a surprising illusion. In this book John Langdon shows us how we can expand our understanding of terms and concepts by looking at ambigrams - words designed to be read upside down, back to front, or in a mirror as well as left to right. He not only presents the reader with a number of strikingly beautiful and arresting ambigrams but also shows how the very shape of the letters can change our idea of the word itself and its meaning. He even disarmingly demonstrates how one goes about making an ambigram. But be warned- it's not as easy as it looks. WORDPLAY is the ultimate

collection, featuring a foreword by Dan Brown-for all those who just can't get enough of the intriguing symbols in his bestselling novels.."
