This book explores the history of literary interpretation of the 'Iliad', the 'Odyssey', and the 'Homeric Hymn to Aphrodite', comprising twelve chapters, some previously published but extensively revised for this collection, and some appearing here in print for the first time. While some chapters closely study the diction, meter, style, and thematic resonance of particular passages and episodes in the Iliad and the Odyssey, others follow diverse pathways into the interpretation of the epics, including mythological allusion, intertextuality, the metrics of the Homeric hexameter, and the fundamental contrast between divinity and humanity. Also included are two chapters which focus on the work of Milman Parry and Ioannis Kakridis, founders of the two most fruitful twentieth-century scholarly approaches to Homeric scholarship: the study of the Iliad and the Odyssey as traditional oral formulaic

poetry (Parry), and the study of the poems' adaptations and transformations of traditional mythology, folktales, and poetic motifs in accordance with their distinctive themes and poetic purposes (Kakridis). The volume draws to a close with three chapters which discuss some of the most compelling poetic and critical receptions of the Iliad and the Odyssey since the late nineteenth century, and the institutional reception of the epics in colleges and universities in the United States over the past two centuries. Written over a period of 45 years, this collection reflects author Seth L. Schein's long-standing interest in, and scholarly and critical approaches to, the literary interpretation of Homeric poetry.

Since the first edition of this text was published, endovascular technique has become a mainstay of vascular care, treating disease that would have previously required open surgery. Understanding tibio-peroneal occlusive disease and its management is vital in treating patients with peripheral vascular disease. Occlusive disease and the resulting ischemia threaten the viability of the lower limb, particularly in diabetics. Edited by widely-respected vascular surgeon Anton N. Sidawy, this textbook explores all aspects of tibio-peroneal disease, including pathophysiology, diagnosis, treatment, and management of the lower extremity after adequate circulation is restored. It examines risk factors, disease distribution, and general management issues connected with diabetic patients, as well as adjuvant chemotherapy to improve patency of prosthetic bypasses, thrombolytic therapy for failed bypasses, wound healing, and amputations of the foot and leg.

Now in full color, *Handbook of Patient Care in Vascular Diseases* is a concise quick-reference guide to effectively diagnosing and treating patients with common arterial and venous vascular diseases. The authors discuss in detail the primary symptom-claudication-an intermittent pain in the leg or foot while walking, its predisposing factors, the current diagnostic methodologies, the impressive advances in the therapeutic armamentarium, and the need to screen for co-existing coronary artery

disease. Additional chapters describe cutting-edge noninvasive angiography and vascular flow studies, specific drug therapy for claudication, regression of atherosclerosis therapy, gene therapy, and drug eluting stents for peripheral arterial disease. The authors also examine the epidemiology of LEAD, the effects of smoking and effective smoking cessation programs, its pathogenesis and its association with lipid abnormalities and hypertension, aggressive risk factor modification, and the need to measure the ankle brachial index of every patient over 45.

*Emergency Surgery* provides both a practical guide and an understanding of the issues that need to be considered in the management of emergency surgery patients. It presents a clear account of the key issues involved in the assessment, investigation, resuscitation and surgical management of patients who present to the on-call emergency team. It considers the full breadth of issues encountered in these patients including anaesthesia, pre-op resuscitation/optimization, and initial post-operative care including preliminary high dependency/critical care, as well as the complications and acute issues found in acute surgical patients on the ward.
