Manufacturers are not legally required to provide specific information about safety before marketing their products. And the sales of supplements have been steadily increasing&€"all together, the various types now bring in almost

The Ghana Dance Ensemble takes Ghana's national culture and interprets it in performance using authentic dance forms adapted for local or foreign audiences. Often, says Paul Schauert, the aims of the ensemble and the aims of the individual performers work in opposition. Schauert discusses the history of the dance troupe and its role in Ghana's post-independence nation-building strategy and illustrates how the nation's culture makes its way onto the stage. He argues that as dancers negotiate the terrain of what is or is not authentic, they also find ways to express their personal aspirations, discovering, within the framework of nationalism or collective identity, that there is considerable room to reform national ideals through individual virtuosity.

Recently, there has been a fundamental shift in the global health and wellness industry from disease treatment to preventing chronic diseases. The use of nutraceuticals and functional foods in prevention efforts could lead to a decreased dependency on drugs.

The pharmaceutical industry recognizes this shift; however, serious concerns have arisen regarding the claimed efficacy, quality, and safety of products used as medical foods. This book examines the consumer and industry mindshift, including the scientific evidence of these foods as effective adjuncts to pharmacotherapy during all stages of treatment of various diseases, thus indicating that pharmaceuticals and nutraceuticals can and should coexist. It details quality, safety, and efficacy of foods, drugs, and nutrients; marketing and product positioning; regulatory perspectives; biomarkers and metabolites; probiotics; food/drug interactions; and future industry trends. In addition, food bioactives represent diet-based molecules that perform physiological roles related to disease prevention and treatment. As such, a considerable overlap exists between food bioactives and drugs—this book presents the case for comparing and contrasting foods versus drugs in several models of health and disease.
