The heart of every power plant Siemens Steam Turbines are an essential piece of turbomachinery to many power plants worldwide. They are applied either as a generator drive or a mechanical drive for pumps and compressors. The modular design concept of all steam turbines ensures high flexibility, availability and a reduction of time-to-market.

Siemens patented the HydroAir™ turbine which is able to resolve the challenges present in wave energy conversion while offering outstanding performance and reliability. Constructed to withstand the rigors of a marine environment and ambient conditions, it uses a combination of corrosion-resistant stainless steel, aluminum and reinforced ...

The turbine-governor model is linked to one or two synchronous generators and determines the shaft mechanical power (PMECH) or torque (TM) for the generator model. In old Simpov turbine models, the turbine are composed of two models - One Governor (Input = Speed, output = Gate) - One Turbine (Input = Gate, Output = TM)
