Silviculture And Forest Management

Silviculture, Forest Management and Extension

Silviculture is the cultivation and care of forest trees and is the heart of the field of forestry. A silvicultural system is a series of planned treatments for tending, harvesting, and reestablishing groups of trees similar in age, composition, and structure (called a stand).

Silviculture, Forest Management and Extension Silviculture is the art and science of controlling the establishment, growth, composition, health, and quality of forests and woodlands to meet the diverse needs and values of landowners and society such as wildlife habitat, timber, water resources, restoration, and recreation on a sustainable Silviculture Forest Management And Extension

Silviculture is used to manage change in forest stands to achieve desired results—overall forest health improvement, faster timber yields, high-quality timber, acceptable regeneration, improved wildlife habitat, and other goals. The basis for silviculture is our ability to predict the probable outcome of a silvicultural treatment.

In the Silviculture and Restoration Ecology lab at Univeristy of Missouri, we work to advance the science of silviculture through applied and basic research. Our research emphasizes addressing contemporary issues in forest management, with specific interest in merging silvicultural practices with the emerging science of restoration ecology.

Forest Management - Pryor & Rickett Silviculture

Pryor & Rickett Silviculture is dedicated to working closely with clients and their teams to manage woodlands of all sizes and forest types. We manage over 50,000 acres of woodland covering Cornwall to Kent, throughout central England and Wales and north to Scotland. The properties managed are remarkably diverse, ranging from species rich ancient broadleaved woods to extensive conifer plantations, and from small farm woodlands to whole estates.

The Washington State University Extension is hosting an online Forest Steward Coached Planning course to help landowners understand how to write a forest management plan based on their own objectives.

Contact (Silviculture And Forest Management)

Abstract. Secondary forests are forests regenerating through natural processes after significant reduction in the original vegetation at a point in time or over an extended period, and displaying a major difference in forest structure and/or canopy species composition with respect to nearby primary forests on

similar sites.
