Scores of talented and dedicated people serve the forensic science community, performing vitally important work. However, they are often constrained by lack of adequate resources, sound policies, and national support. It is clear that change and advancements, both systematic and scientific, are needed in a number of forensic science disciplines to ensure the reliability of work, establish enforceable standards, and promote best practices with consistent application. Strengthening Forensic Science in the United States: A Path Forward provides a detailed plan for addressing these needs and suggests the creation of a new government entity, the National Institute of Forensic Science, to establish and enforce standards within the forensic science community. The benefits of improving and regulating the forensic science disciplines are clear: assisting law enforcement officials, enhancing homeland security, and reducing the risk of wrongful conviction and exoneration. Strengthening Forensic Science in the United States gives a full account of what is needed to advance the forensic science disciplines, including upgrading of systems and organizational structures, better training, widespread adoption of uniform and enforceable best practices, and mandatory certification and accreditation programs. While this book provides an essential call-to-action for congress and policy makers, it also serves as a vital tool for law enforcement agencies, criminal prosecutors and attorneys, and forensic science educators.

The emergence of severe acute respiratory syndrome (SARS) in late 2002 and 2003 challenged the global public health community to confront a novel epidemic that spread rapidly from its origins in southern China until it had reached more than 25 other countries within a matter of months. In addition to the number of patients infected with the SARS virus, the disease had profound economic and political repercussions in many of the affected regions. Recent reports of isolated new SARS cases and a fear that the disease could reemerge and spread have put public health officials on high alert for any indications of possible new outbreaks. This report examines the response to SARS by public health systems in individual countries, the biology of the SARS coronavirus and related coronaviruses in animals, the economic and political fallout of the SARS epidemic, quarantine law and other public health measures that apply to combating infectious diseases, and the role of international organizations and scientific cooperation in halting the spread of SARS. The report provides an illuminating survey of findings from the epidemic, along with an assessment of what might be needed in order to contain any future outbreaks of SARS or other emerging infections.

Bestselling author Dan Ariely reveals fascinating new insights into motivation—showing that the subject is far more complex than we ever imagined. Every day we work hard to motivate ourselves, the people we live with, the people who work for and do business with us. In this way, much of what we do can be defined as being “motivators.” From the boardroom to the living room, our role as motivators is complex, and the more we try to motivate partners and children, friends and coworkers, the clearer it becomes that the story of motivation is far more intricate and fascinating than we've assumed. Payoff investigates the true nature of motivation, our partial blindness to the way it works, and how we can bridge this gap. With studies that range from Intel to a kindergarten classroom, Ariely digs deep to find the root of motivation—how it works and how we can use this knowledge to approach important choices in our own lives. Along the way, he explores intriguing questions such as: Can giving employees bonuses harm productivity? Why is trust so crucial for successful motivation? What are our misconceptions about how to value our work? How does your sense of your mortality impact your motivation?

For the millions who had fought in the Great War, and for their families, the 'land fit for heroes' turned out to be an illusion; instead there was suffering and deprivation. Out of this, on 1 July 1921 was born the British Legion. In the years that followed the Legion fought for justice for the ex-service community, meanwhile seeking to protect them. It introduced the Poppy Appeal and insisted on an annual act of national Remembrance for the fallen. It went to extraordinary lengths to try to prevent another war, ultimately finding itself in controversial discussions with Hitler. Even after the Second World War the Legion's work was far from over; the war-disabled and the war widows seemed to have been forgotten in the new welfare state. Remembrance itself appeared to be under threat as the memory of war receded. There were more battles to be fought, while conflicts such as the Gulf War brought fresh problems. Perhaps most inspiring is the human aspect. Those who have done the Legion's work represent every class of society, from admirals and former private soldiers to poppy collectors. But they have one thing in common: compassion for all who have suffered in the service of the country. This is their story too. Why do doctors, generals, civil servants, and others consistently make wrong decisions that cause enormous harm to others? And why do you sit through a boring play just because the tickets were expensive? This iconoclastic book demonstrates that irrationality exists on a startling and hitherto unsuspected scale. Sutherland analyzes its causes in detail by drawing on many fascinating psychological experiments. He ends each chapter with brief precepts showing how to avoid irrational behavior. Never has irrationality been so well explained - or been so entertaining - as in Stuart Sutherland's witty dissection of muddled thinking. You'll wince in rueful recognition at his stories of misguided decisions in every branch of human affairs and quote the morals of his stories to your children and colleagues. Lucid, provocative, and witty, Irrationality is an invaluable guide to straight thinking!

In 1995, before leaving his much-loved home in North Yorkshire to move back to the States for a few years with his family, Bill Bryson insisted on taking one last trip around Britain, a sort of vale-

dictory tour of the green and kindly island that had so long been his home. His aim was to take stock of the nation's public face and private parts (as it were), and to analyse what precisely it was he loved so much about a country that had produced Mar-mite; a military hero whose dying wish was to be kissed by a fellow named Hardy; place names like Farleigh Wallop, Titsey and Shellow Bowells; people who said 'Mustn't grumble', and 'Ooh lovely' at the sight of a cup of tea and a plate of biscuits; and Gardeners' Question Time. *Notes from a Small Island* was a huge number-one bestseller when it was first published, and has become the nation's most loved book about Britain, going on to sell over two million copies.

American economist IRVING FISHER (1867-1947) was professor of political economy at Yale University. Among his many books are *Mathematical Investigations in the Theory of Value and Prices* (1892), *The Rate of Interest* (1907), *Why Is the Dollar Shrinking? A Study in the High Cost of Living* (1914), and *Booms and Depressions* (1932).

This volume constitutes the papers and discussions from a symposium on "Societal Risk Assessment: How Safe is Safe Enough?" held at the General Motors Research Laboratories on October 8-9, 1979. This symposium was the twenty-fourth in an annual series sponsored by the Research Laboratories. Initiated in 1957, these symposia have as their objective the promotion of the interchange of knowledge among specialists from many allied disciplines in rapidly developing or changing areas of science or technology. Attendees characteristically represent the academic, government, and industrial institutions that are noted for their ongoing activities in the particular area of interest. The objective of this symposium was to develop a balanced view of the current status of societal risk assessment's role in the public policy process and then to establish, if possible, future directions of research. Accordingly, the symposium was structured in two dimensions; certainty versus uncertainty and the subjective versus the objective. Furthermore, people representing extremely diverse disciplines concerned with the perception, quantification, and abatement of risks were brought together to provide an environment that stimulated the exchange of ideas and experiences. The keys to this exchange were the invited papers, arranged into four symposium sessions. These papers appear in this volume in the order of their presentation. The discussions that in turn followed from the papers are also included.
