The three phase induction motor or synchronous motor is used as AC drive. The three phase induction motor has following advantages : Low cost, Low maintenance, Simple construction, Reliability and high efficiency. There are following methods of speed control of three phase induction motor

The actual speed of three phase asynchronous motor is given by $n = n_s (1 - s) = 120f / p (1 - s)$. It can be seen from the formula that the speed of 3 phase induction motor can be changed by the means of changing the number of induction motor's poles "p", the slip "s" and the frequency of power supply "f". Pole-changing speed control
