EFFECTS OF WARNING LAMP COLOR AND INTENSITY ON DRIVER VISION Report of work on Non-Blinding Emergency Vehicle Lighting (NBEVL) Michael J. Flannagan Daniel F. Blower Joel M. Devonshire The University of Michigan Transportation Research Institute Ann Arbor, Michigan 48109-2150 U.S.A. Prime contractor: SAE International 400 Commonwealth Drive

The rockhopper , or hopper trawl, as it is commonly known as, is a trawl that is towed on the seabed, with the mouth held open by a pair of otter boards (trawl doors), It is designed to be towed over hard, rough seabeds and rigged with a rock hopper footrope to minimise damage when being towed over these seabeds.

#### Final SEA 032310 - U.S. Customs and Border Protection

This is another version of the standard three warp twin rig set up. Although the main concept of multi rig systems is to enable the vessel to cover a wider area of seabed with no increase in drag, this method evolved to be able to efficiently target both bottom living species and some of the round fish living slightly higher in the water column.
