HKSAR - Buildings Department. Note on Obsolete Versions: "Obsolete Versions" provides the digitized obsolete versions and we would continually upload the other available obsolete versions from time to time for reference purposes.

Practice Notes for Authorized Persons, Registered ...

In engineering, a foundation is the element of a structure which connects it to the ground, and transfers loads from the structure to the ground. Foundations are generally considered either shallow or deep. Foundation engineering is the application of soil mechanics and rock mechanics (Geotechnical engineering) in the design of foundation elements of structures.

Foundation (engineering) - Wikipedia

Structural Engineers, Engineering Design Consultants. A person trained to apply sound scientific principles in the design and investigation of buildings, tunnels, bridges, decks, footings, swimming pools, retaining walls, foundations, underpinning, towers and other structures.

Skarda and Associates, Inc. - Structural Engineers ...

Santa Barbara - Timeline

Structural dampness is the presence of unwanted moisture in the structure of a building, either the result of intrusion from outside or condensation from within the structure. A high proportion of damp problems in buildings are caused by ambient climate dependent factors of condensation and rain penetration. Capillary penetration of fluid from the ground up through concrete or masonry is known ...

Damp (structural) - Wikipedia

Buildings, an international, peer-reviewed Open Access journal. The paper is an attempt to answer the question whether the material-optimized roof construction using cross-laminated timber (CLT) is safe in terms of moisture content in the demanding northern costal climates.
