This textbook provides a comprehensive introduction to the political systems of all ASEAN countries and Timor-Leste from a comparative perspective. It investigates the political institutions, actors and processes in eleven states, covering democracies as well as autocratic regimes. Each country study includes an analysis of the current system of governance, the party and electoral system, and an assessment of the state, its legal system and administrative bodies. Students of political science and regional studies will also learn about processes of democratic transition and autocratic persistence, as well as how civil society and the media influence the political culture in each country.

K.C. Nicolaou - Winner of the Nemitsas Prize 2014 in Chemistry This book is a must for every synthetic chemist. With didactic skill and clarity, K. C. Nicolaou and E. Sorensen present the most remarkable and ingenious total syntheses from outstanding synthetic organic chemists. To make the complex strategies more accessible, especially to the novice, each total synthesis is analyzed retrosynthetically. The authors then carefully explain each synthetic step and give hints on alternative methods and potential pitfalls. Numerous references to useful reviews and the original literature make this book an indispensable source of further information. Special emphasis is placed on the skillful use of graphics and schemes: Retrosynthetic analyses, reaction sequences, and stereochemically crucial steps are presented in boxed sections within the text. For easy reference, key intermediates are also shown in the margins. Graduate students and researchers alike will find this book a gold mine of useful information essential for their daily work. Every synthetic organic chemist will want to have a copy on his or her desk.

Weapons and tools are frequently found depicted in rock art in many parts of the globe and different periods and in varying social contexts. This collection of papers by leading rock art specialists examines the subjective and metaphorical value of weapons and tools in art, the actions that created them, and their contexts. It also takes into account that such representations incorporate and transmit some kind of understanding about the world and the relationship between objects and humans. Contributors analyse objects and weapons as status symbols, as evidences of cultural contacts, as ideological devices, etc. Divided into regional sections which, for once, do not focus on Scandinavia, chapters deal with the representations of weapons and certain kinds of tools (such as axes and sickles) in different prehistoric, protohistoric and traditional community contexts all over the world. Attention focuses on rock art, but also looks at stelae and statue-menhirs, as well as other kinds of container or vehicle for this kind of depiction. The major concern is to discuss the possible meanings of these embodied signs in different areas and periods, since meanings are permeable both to time and space. Papers either centre their attention in broader approaches based on a specific area, region or people, or focus on particular case studies.

ing Marion Kauffman Foundation to support continuing work on social entrepreneurship.

This book teaches medical coding for anesthesia and pain management. It will prepare the reader for passing the Certified Anesthesia and Pain Management Coder (CANPC) exam as well as improving their professional practice. The book goes beyond the concepts and applications that are required to pass the exam. It provides critical insights into actual scenarios faced by coders in the real world. 70 unique cases are presented that will highlight the correct coding method. These give the reader practice in applying principles to actual patient cases. The author's unique formula allows the reader to arrive at the best coding decision for the most complex patients. Each case is discussed from a clinical viewpoint to explain the coding rationale. This book is both an invaluable asset for anyone working towards a CANPC exam but also serves as a useful reference for those currently holding the certificate.

Experts discuss the potential for open education tools, resources, and knowledge to transform the economics and ecology of education. Given the abundance of open education initiatives that aim to make educational assets freely available online, the time seems ripe to explore the potential of open education to transform the economics and ecology of education. Despite the diversity of tools and resources already available—from well-packaged course materials to simple games, for students, self-learners, faculty, and educational institutions—we have yet to take full advantage of shared knowledge about how these are being used, what local innovations are emerging, and how to learn from and build on the experiences of others. *Opening Up Education* argues that we must develop not only the technical capability but also the intellectual capacity for transforming tacit pedagogical knowledge into commonly usable and visible knowledge: by providing incentives for faculty to use (and contribute to) open education goods, and by looking beyond institutional boundaries to connect a variety of settings and open source entrepreneurs. These essays by leaders in open education describe successes, challenges, and opportunities they have found in a range of open education initiatives. They approach—from both macro and micro perspectives—the central question of how open education tools, resources, and knowledge can improve the quality of education. The contributors (from leading foundations, academic institutions, associations, and projects) discuss the strategic underpinnings of their efforts first in terms of technology, then content, and finally knowledge. They also address the impact of their projects, and how close they come to achieving a vision of sustainable, transformative educational opportunities that amounts to much more than pervasive technology. The history of pharmacology travels along with that of scientific methodologies and the novel frontiers of pharmacology give way to a novel world in search of drugs and advanced technologies. Cons-

tant growth in this field has also altered significantly the way of designing a fresh drug. Modern drug discovery is actually based on profound knowledge regarding the disease and both molecular as well as cellular mechanisms involved in its development. The aim of this book is to provide valuable information on ethnopharmacology and toxicology, and gives an overview of its future applications.

This book is a linguistic study of Jahai, a language belonging to the Northern Aslian subgroup of the Aslian branch of the Mon-Khmer language family. The language is spoken by groups of foragers in the mountain rainforests of northern Peninsular Malaysia and southernmost Thailand, its total number of speakers estimated at around 1,000. This study describes the grammar of Jahai, including its phonology, processes of word formation, word classes, and syntax. It also includes a word-list. While primarily aimed at linguistic description, the study makes use of suitable theoretical models for the analysis of linguistic features. In particular, models of Prosodic and Template Morphology are employed to describe the language's intricate processes of affixation. Typological comparisons are made at times, especially with other Aslian languages. The study is intended to expand our knowledge of the understudied Aslian languages. It is also intended to contribute to Mon-Khmer and Southeast Asian language studies in general, and, hopefully, also to a wider linguistic context. Furthermore, it may serve as a practical source of linguistic information for researchers and others working among the Northern Aslian speech communities.

The Global status report on road safety 2018 launched by WHO in December 2018 highlights that the number of annual road traffic deaths has reached 1.35 million. Road traffic injuries are now the leading killer of people aged 5-29 years. The burden is disproportionately borne by pedestrians cyclists and motorcyclists in particular those living in developing countries. The report suggests that the price paid for mobility is too high especially because proven measures exist. Drastic action is needed to put these measures in place to meet any future global target that might be set and save lives.

An ethnographic study of Indian democracy that shows how agrarian life creates values of citizenship and active engagement that are essential for the cultivation of democracy. Cultivating Democracy provides a compelling ethnographic analysis of the relationship between formal political institutions and everyday citizenship in rural India. Banerjee draws on deep engagement with the people and social life in two West Bengal villages from 1998-2013, during election campaigns and in the times between, to show how the micro-politics of their day-to-day life builds active engagement with the macro-politics of state and nation. Her sensitive analysis focuses on several "events" in the life of the villages shows how India's agrarian rural society helps create practices and conceptual space for these citizens to be effective participants in India's great democratic exercises. Specifically, she shows how the villagers' creative practices around their kinship, farming and religion, while navigating encounters with local communist cadres, constitute a vital and continuing cultivation of those republican virtues of cooperation, civility, solidarity and vigilance which the visionary Ambedkar considered essential for the success of Indian democracy. At a time when so much of that constitutional vision is under threat, this book provides a crucial scholarly rebuttal to all, on Right or Left, who dismiss rural citizens' political capacities and democratic values. This book will appeal to anyone interested in India's political culture and future, its rural society, or the continuing relevance of political anthropology.

According to the Chinese zodiac, 2017 was the year of the 'fire rooster', an animal often associated with the mythical fenghuang, a magnificently beautiful bird whose appearance is believed to mark the beginning of a new era of peaceful flourishing. Considering the auspicious symbolism surrounding the fenghuang, it is fitting that on 18 October 2017, President Xi Jinping took to the stage of the Nineteenth Party Congress to proclaim the beginning of a 'new era' for Chinese socialism. However, in spite of such ecumenical proclamations, it became immediately evident that not all in China would be welcome to reap the rewards promised by the authorities. Migrant workers, for one, remain disposable. Lawyers, activists and even ordinary citizens who dare to express critical views also hardly find a place in Xi's brave new world. This Yearbook traces the stark new 'gilded age' inaugurated by the Chinese Communist Party. It does so through a collection of more than 40 original essays on labour, civil society and human rights in China and beyond, penned by leading scholars and practitioners from around the world.
