Mechanical laws of motion were applied very early for better understanding anthropomorphic action as suggested in advance by Newton «For from hence are easily deduced the forces of machines, which are compounded of wheels, pullies, levers, cords, and weights, ascending directly or obliquely, and other mechanical powers; as also the force of the tendons to move the bones of animals». In the 19th century E.J. Marey and E. Muybridge introduced chronophotography to scientifically investi-

gate animal and human movements. They opened the field of motion analysis by being the first scientists to correlate ground reaction forces with kinetics. Despite of the apparent simplicity of a given skilled movement, the organization of the underlying neuro-musculo-skeletal system remains unknown. A reason is the redundancy of the motor system: a given action can be realized by different muscle and joint activity patterns, and the same underlying activity may give rise to several movements. After the pioneering work of N. Bernstein in the 60's on the existence of motor synergies, numerous researchers «walking on the border» of their disciplines tend to discover laws and principles underlying the human motions and how the brain reduces the redundancy of the system. These synergies represent the fundamental building blocks composing complex movements. In robotics, researchers face the same redundancy and complexity challenges as the researchers in life sciences. This book gathers works of roboticians and researchers in biomechanics in order to promote an interdisciplinary research on anthropomorphic systems at large and on humanoid robotics in particu-

lar.

Until recently, very little was known about medieval shoes. Glimpses in manuscript illustrations and on funerary monuments, with the occasional reference by a contemporary writer, was all that the costume historian had as evidence, not least because leather tends to perish after prolonged contact with air, and very few actual examples survived. In recent years, however, nearly 2,000 shoes, many complete and in near-perfect condition, have been discovered preserved on the north bank of the Thames, and are now housed in the Museum of London. This collection, all from well-dated archaeological contexts, fills this vast gap in knowledge, making it possible to chart precisely the progress of shoe fashion between the twelfth and fifteenth centuries.

The Thing. Daredevil. Captain Marvel. The Human Fly. Drawing on DC and Marvel comics from the 1950s to the 1990s and marshaling insights from three burgeoning fields of inquiry in the humanities—disability studies, death and dying studies, and comics studies—José Alaniz seeks to redefine the contemporary understanding of the superhero. Beginning in the Silver Age, the genre increasingly challenged and complicated its hypermasculine, quasi-eugenicist biases through such disabled figures as Ben Grimm/The Thing, Matt Murdock/Daredevil, and the Doom Patrol. Alaniz traces how the superhero became increasingly vulnerable, ill, and mortal in this era. He then proceeds to a reinterpretation of characters and series—some familiar (Superman), some obscure (She-Thing). These genre changes reflected a wider awareness of related body issues in the postwar United States as represented by hospice, death with dignity, and disability rights movements. The persistent highlighting of the body's "imperfection" comes to forge a predominant aspect of

the superheroic self. Such moves, originally part of the Silver Age strategy to stimulate sympathy, enhance psychological depth, and raise the dramatic stakes, developed further in such later series as The Human Fly, Strikeforce: Morituri, and the landmark graphic novel The Death of Captain Marvel, all examined in this volume. Death and disability, presumed routinely absent or denied in the superhero genre, emerge to form a core theme and defining function of the Silver Age and beyond.

Seit der klassischen Darstellung H.W. Wolffs von 1973 gibt es keinen Gesamtentwurf einer alttestamentlichen Anthropologie mehr. Diese Lücke versucht Bernd Janowski mit seinem Lehr- und Studienbuch zu schließen, das sich von Wolffs Lehrbuch nicht nur durch einen anderen Ansatz, sondern auch durch die Berücksichtigung der altorientalischen Religionsgeschichte und der neueren Kulturwissenschaft unterscheidet. Die vorliegende Darstellung, in deren Zentrum die anthropologische Grundfrage »Was ist der Mensch?« (Psalm 8,5) und ihre spezifisch biblischen, auf die Leiblichkeit, Gerechtigkeit und Endlichkeit bezogenen Antworten stehen, gliedert sich in sieben Abschnitte.

Narratives are fundamental to our lives: we dream, plan, complain, endorse, entertain, teach, learn, and reminisce through telling stories. They provide hopes, enhance or mitigate disappointments, challenge or support moral order and test out theories of the world at both personal and communal levels. It is because of this deep embedding of narrative in everyday life that its study has become a wide research field including disciplines as diverse as linguistics, literary theory, folklore, clinical psychology, cognitive and developmental psychology, anthropology, sociology, and history. In *Telling Stories* leading scholars illustrate how narratives build bridges among language, identity, interaction, society, and culture; and they investigate various settings such as therapeutic and medical encounters, educational environments, politics, media, marketing, and public relations. They analyze a variety of topics from the narrative construction of self and identity to the telling of stories in different media and the roles that small and big life

stories play in everyday social interactions and institutions. These new reflections on the theory and analysis of narrative offer the latest tools to researchers in the fields of discourse analysis and sociolinguistics.

The study of fire debris analysis is vital to the function of all fire investigations, and, as such, Fire Debris Analysis is an essential resource for fire investigators. The present methods of analysis include the use of gas chromatography and gas chromatography-mass spectrometry, techniques which are well established and used by crime laboratories throughout the world. However, despite their universality, this is the first comprehensive resource that addresses their application to fire debris analysis. Fire Debris Analysis covers topics

such as the physics and chemistry of fire and liquid fuels, the interpretation of data obtained from fire debris, and the future of the subject. Its cutting-edge material and experienced author team distinguishes this book as a quality reference that should be on the shelves of all crime laboratories. Serves as a comprehensive guide to the science of fire debris analysis Presents both basic and advanced concepts in an easily readable, logical sequence Includes a full-color insert with figures that illustrate key concepts discussed in the text An introduction to the ancient Kung Fu practice designed to unify physical, mental, and spiritual health • Describes the unique Iron Shirt air-packing techniques that protect vital organs from injuries • Explains the rooting practice exercises necessary to stabilize and center oneself • Includes guidelines for building an Iron Shirt Chi Kung daily practice Long before the advent of firearms, Iron Shirt Chi Kung, a form of Kung Fu, built powerful bodies able to withstand hand-to-hand combat. Even then, however, martial use was only one aspect of Iron Shirt Chi Kung, and today its other aspects remain vitally significant for anyone seeking better health, a sound

mind, and spiritual growth. In Iron Shirt Chi Kung Master Mantak Chia introduces this ancient practice that strengthens the internal organs, establishes roots to the earth's energy, and unifies physical, mental, and spiritual health. Through a unique system of breathing exercises, he demonstrates how to permanently pack concentrated air into the connective tissues (the fasciae) surrounding vital organs, making them nearly impervious to injuries--a great benefit to athletes and other performers. He shows readers how once they root themselves in the earth they can direct its gravitational and healing power throughout their bone structure. Additionally, Master Chia presents postural forms, muscle-tendon meridians, and guidelines for developing a daily practice routine. After becoming rooted and responsive, practitioners of Iron Shirt Chi Kung can then focus on higher spiritual work.

Between 1989 and 1991, excavations in the parish of Flixborough, North Lincolnshire, unearthed remains of an Anglo-Saxon settlement associated with one of the largest collections of artefacts and animal bones yet found on such a site. In an unprecedented occupation sequence from an Anglo-Saxon rural settlement, six main periods of occupation have been identified, dating from the seventh to the early eleventh centuries; with a further period of activity, between the twelfth and fifteenth centuries AD. The remains of approximately forty buildings and other structures were uncovered; and due to the survival of large refuse deposits, huge quantities of artefacts and faunal remains were encountered compared with most other rural settlements of the period. Volume 2 contains detailed presentation of some 10,000 recorded finds, over 6,000 sherds of pottery, and many other residues and bulk

finds, illustrated with 213 blocks of figures and 67 plates, together with discussion of their significance. It presents the most comprehensive, and currently unique picture of daily life on a rural settlement of this period in eastern England, and is an assemblage of Europe wide significance to Anglo-Saxon and early medieval archaeolo-

gists.
