Mit den neuen Verrechnungspreisrichtlinien Verrechnungspreisgestaltungen gehören zu den umstrittensten Bereichen der internationalen Besteuerung. Die Zahl der daraus resultierenden Besteuerungskonflikte und deren monetäre Auswirkungen sind für die betroffenen Unternehmen zum Teil enorm und nicht (immer) vorherzusehen. Da es jedoch nicht den „einzig richtigen“ Verrechnungspreis gibt – Insider sprechen von zulässigen Bandbreiten –, ist es für Gerichte viele Jahre später schwierig, wenn nicht unmöglich, über Recht oder Unrecht zu urteilen. Die komplett neu bear-

beitete 3. Auflage der Case Studies gibt in 30 Fallbeispielen aus der täglichen Beratungs- und Prüfungspraxis Hilfestellung für Unternehmen, Beratung und Finanzverwaltungen zur Bewältigung der Verrechnungspreisproblematik. Die Case Studies werden sowohl aus Sicht der deutschen als auch der österreichischen Rechtslage dargestellt und decken alle häufig diskutierten Verrechnungspreisthemen ab. Eine Fülle von Zusatzinformationen, wie Literatur- und Judikaturhinweise sowie Internetlinks, verstärkt den Praxisbezug.

Conventional medical science on the Chinese art of Tai Chi now shows what Tai Chi masters have known for centuries: regular practice leads to more vigor and flexibility, better balance and mobility, and a sense of well-being. Cutting-edge research from Harvard Medical School also supports the long-standing claims that Tai Chi also has a beneficial impact on the health of the heart, bones, nerves and muscles, immune system, and the mind. This research provides fascinating insight into the underlying physiological mechanisms that explain how Tai Chi actually works. Dr. Peter M. Wayne, a longtime Tai Chi teacher and a researcher at Harvard Medical School, developed and tested protocols similar to the simplified program he includes in this book, which is suited to people of all ages, and can be done in just a few minutes a day. This book includes:

- The basic program, illustrated by more than 50 photographs
- Practical tips for integrating Tai Chi into everyday activities
- An introduction to the traditional principles of Tai Chi
- Up-to-date summaries of the research literature on the health benefits of Tai Chi
- How Tai Chi can enhance work productivity, creativity, and sports performance
- And much more

The first edition of this manual appeared in 1992 and was entitled ECAT Assay Procedures. It was the result of a unique cooperation between experts brought together by the European Concerted Action on Thrombosis and Disabilities (ECAT). The Concerted Action was at that time under the auspices of the Commission of the European Union. The second edition, like the first edition, deals with diagnostic tests within the field of thrombosis. However, the second edition has a broader scope because it is no longer limited by the frontiers of ECAT. Experts all over the world, in and outside ECAT,

have contributed to this edition. The editors are very grateful for their contributions. The need for a new edition is obvious. Since 1992 new assays have been introduced for research, diagnosis, and therapy of thrombosis; for other assays improvements have been suggested, while a few others became redundant. The editors waived the radioimmunoassays of α -thromboglobulin and platelet factor 4 due to the fact that the kits required for these assays are rarely, or no longer, available. Also the PAI-1 activity assay was waived as it is liable to many inconsistencies and to large variations. A list of names and addresses of manufacturers marketing the kits and reagents has been compiled, together with a list of the recommended nomenclature of quantities in thrombosis and haemostasis, in order to facilitate the use of the updated version. These lists have been carefully compiled by Johannes J. Sidelmann, PhD, Department of Clinical Biochemistry in Esbjerg, Denmark.

SARS is a newly identified human infection caused by a corona virus unlike any other known human or animal virus in its family. The analysis of epidemiological information obtained from the sites of the outbreaks of SARS is still underway but the overall case fatality ratio is known to approach 11% although the rate among the elderly is much higher. Currently the major challenges for the treatment of SARS are: the source of the SARS virus and mode of transmission are still not well understood; there are problems with diagnostic tools; there is no effective treatment; and there is no vaccine for SARS. The above-mentioned difficulties and challenges have motivated national authorities health workers and scientists to explore the potential of complementary treatment. The results of research on integrated treatment with TCM and Western medicine showed that it is safe and that it also has some potential clinical benefits. Therefore the experts suggested that records of such experience could serve as reference material for treatment of SARS in the future. This publication is intended to share experience in the complementary treatment of SARS patients; share the experience of clinical studies in the field of traditional medicine for treatment of SARS between the physicians and researchers; and to further encourage and promote the quality of research in the field of traditional medicine.
