First proposed by Trier in the 1930s, semantic field theory proposes that a group of words with interrelated meanings can be categorized under a larger conceptual domain. This entire entity is thereby known as a semantic field. The words boil, bake, fry, and roast, for example, would fall under the larger semantic category of cooking.

Semantic Fields Bing: The Application Of Semantic Field From the chart above, we can see most of students are satisfied with the application of semantic field in vocabulary teaching. Most of the students believe that the semantic field could help them improve their reading ability, basic knowledge, writing ability, and their ability of vocabulary acquisition.

**What is a semantic field? | MyTutor**

Semantic (or sometimes called lexical) fields are a technique often used by writers to keep a certain image persistent in their readers' mind. They are a collection of words which are related to one another be it through their similar meanings, or through a more abstract relation.

In linguistics, a semantic field is a group of words with related meanings. The words in

a semantic field are usually part of a category, such as agricultural words or weather words. Semantic fields have applications in anthropology and computational linguistics. From an anthropological perspective, the types of words found in a semantic field within a given language often have cultural significance.

Publisher: Oxford University Press. DOI:10.1093/acprof:oso/9780198242468.003.0007. This chapter describes semantic field theory and gives valid points for argument for its inclusion within a complete semantics of natural language. Semantic field theory develops, historically and conceptually, from the work of Ferdinand de Saussure who put forward the view of language as an interconnected system of signs such that an alteration of any of the elements involved a change in the entire system.
