

Read Free The Next 100 Years A Forecast For The 21st Century

Eventually, you will unconditionally discover a supplementary experience and success by spending more cash. yet when? do you acknowledge that you require to acquire those all needs next having significantly cash? Why dont you attempt to get something basic in the beginning? Thats something that will lead you to understand even more on the subject of the globe, experience, some places, following history, amusement, and a lot more?

It is your totally own become old to take steps reviewing habit. in the midst of guides you could enjoy now is **The Next 100 Years A Forecast For The 21st Century** below.

7CHIW3 - HODGES PHELPS

'Amazing. It would be my desert island choice' Martin Rees 'Fascinating, beautiful, alarming and revelatory use of mapping and infographics' Stephen Fry on EarthTime maps 'An indispensable read' Arianna Huffington From the global impact of the Coronavirus to exploring the vast spread of the Australian bushfires, join authors Ian Goldin and Robert Muggah as they trace the ways in which our world has changed and the ways in which it will continue to change over the next hundred years. Map-making is an ancient impulse. From the moment homo sapiens learnt to communicate we have used them to make sense of our surroundings. But as Albert Einstein once said, 'you can't use old maps to explore a new world.' And now, when the world is changing faster than ever before, our old maps are no longer fit for purpose. Welcome to Terra Incognita. Based on decades of research, and combining mesmerising, state-of-the-art satellite maps with enlightening and passionately argued analysis, Ian and Robert chart humanity's impact on the planet, and the ways in which we can make a real impact to save it, and to thrive as a species. Learn about: fires in the arctic; the impact of sea level rise on cities around the world; the truth about immigration - and why fears in the West are a myth; the counter-intuitive future of population rise; the miracles of health and education that are waiting around the corner, and the reality about inequality, and how we end it. The book traces the paths of peoples, cities, wars, climates and technologies, all on a global scale. Full of facts that will confound you, inform you, and ultimately empower you, Terra Incognita guides readers to a new place of understanding, rather than to a physical location.

As the profession commences its second century of influence, this collection from 34 international Congress contributors reflects the global nature of the profession and provides a platform for outlining what the future of Home Economics might look like. D Pendergast, Griffith Uni.

'Predictions have made George Friedman a hot property these days.' - The Wall Street Journal In The Next 100 Years, George Friedman offers a lucid, highly readable forecast of the changes we can expect around the world during the twenty-first century. He explains where and why future wars will erupt (and how they will be fought), which nations will gain and lose economic and political power, and how new technologies and cultural trends will alter the way we live in the new century. Drawing on history and geopolitical patterns dating back hundreds of years, Friedman shows that we are now, for the first time in half a millennium, at the dawn of a new era - with changes in store, including: The US-Jihadist war will conclude - replaced by a second full-blown cold war with Russia. China will undergo a major extended internal crisis, and Mexico will emerge as an important world power. A new global war will unfold toward the middle of the century between the United States and an unexpected coalition from Eastern Europe, Eurasia and the Far East; but armies will be much smaller and wars will be less deadly. Technology will focus on space - both for major military uses and for a dramatic new energy resource that will have radical environmental implications. Written with the keen insight and thoughtful analysis that has made George Friedman a renowned expert in geopolitics and forecasting, The Next 100 Years presents a fascinating picture of what lies ahead.

In The Long Game, Rush Doshi demonstrates that China is in fact playing a long, methodical game to replace America as a global hegemon. Drawing from a rich base of Chinese primary sources, including decades worth of party documents and memoirs by party leaders, he traces the basic evolution of Chinese strategy, showing how it evolved in response to changes in US policy and the US's position in the world order.

LONGLISTED FOR THE AUTHOR'S CLUB FIRST NOVEL AWARD 'Emotional, involving, witty and sad. Everyone is going to love Lenni and Margot' JILL MANSELL 'Lenni and Margot are two of the most wonderful, warm, witty and wise heroines I've ever met. Beautiful and glorious' CLARE POOLEY, author of The Authenticity Project Fiercely alive, disarmingly funny and brimming with tenderness, THE ONE HUNDRED YEARS OF LENNI AND MARGOT unwraps the extraordinary gift of life, and revels in our infinite capacity for friendship and love when we need them most.

Life is short. No-one knows that better than seventeen-year-old Lenni. But as she is about to learn, it's not only what you make of life that matters, but who you share it with. Dodging doctor's orders, she joins an art class where she bumps into fellow patient Margot, a rebel-hearted eight-three-year-old from the next ward. Their bond is instant as they realize that together they have lived an astonishing one hundred years. To celebrate their shared century, they decide to paint their life stories: of growing old and staying young, of giving joy, of receiving kindness, of losing love, of finding the person who is everything. As their friendship deepens, it becomes vividly clear that life is not done with Lenni and Margot yet. An extraordinary friendship. A lifetime of stories. Their last one begins here. ----- VOTED BEST UPLIFTING BOOK OF 2021 BY THE INDEPENDENT 'Full of wisdom and kindness. It is just the kind of book I adore' JOANNA CANNON 'Such a delight! I fell head over heels for Lenni and Margot, their wit and vibrancy and marvellous outlooks on life. An utter joy' ABBIE GREAVES 'Charged with light and colour. Gloriously original and full of wisdom, humour, and hope. It made me think and care and laugh and cry. One of my all-time favourite books' HAZEL PRIOR, author of Away with the Penguins 'This is something special: moving, joyful and life-affirming' GOOD HOUSE-KEEPING Book of the Month

George Friedman's company, STRATFOR (Strategic Forecasting), has received incredible accolades for working ahead of the news media and being right on the pulse of political and military action as it unfolds across the globe. A private intelligence agency, it provides commercial organisations with the most up-to-date information about world events which they in turn use to assess their business options. This incredible book, written by the founder of STRATFOR himself, details the secret battles and shock operations that have been taking place beyond the reaches of conventional information networks. Drawing on a wide network of contacts in governments, intelligence agencies and military organisations throughout the world, AMERICA'S SECRET WAR will open readers' eyes to an astonishing world of covert operations that - praise it or fear it - is the nature of this US administration. Compelling, surprising, written with all the pace of an action/adventure thriller, AMERICA'S SECRET WAR documents a terrifying world previously unknown to the general public.

Vogue Paris has always been so much more than a fashion magazine. It has assumed a central and vital role on the international cultural stage, with a history that spans the most inventive decades in fashion and taste, and in the arts and society. It has acted as a cultural bellwether, putting fashion in the context of the larger world in which we live and mirroring its times - the postwar renaissance of Paris and haute couture, the New Wave, the radical seventies, the glamorous eighties. As it enters its second century, it remains at the cutting edge of photography and design. Published to mark the magazine's centenary, this book celebrates Vogue Paris's history from its first issue in 1920 to its current incarnation with Emmanuelle Alt at the helm. On its pages are creations by some of the greatest artists of their era, whether distinguished illustrators such as Lepape, Gruau and Benito, or photographers such as Man Ray, Helmut Newton, Guy Bourdin and Mario Testino. Here, too, are iconic faces: Catherine Deneuve, Audrey Hepburn, Brigitte Bardot, Kate Moss and more. And of course, it showcases the fashion designers who defined the century - Chanel, Dior, Balenciaga, Saint Laurent, McQueen - and explores more broadly the changing mores of the past hundred years.

This book addresses the rising productivity gap between the global frontier and other firms, and identifies a number of structural impediments constraining business start-ups, knowledge diffusion and resource allocation (such as barriers to up-scaling and relatively high rates of skill mismatch).

This book is the first comprehensive account of the International Labour Organization's 100-year history. At its heart is the concept of global social policy, which encompasses not only social policy in its national and international dimensions, but also development policy, world trade, international migration and human rights. The book focuses on the ILO's roles as a key player in debates on poverty, social justice, wealth distribution and social mobility subjects and as a global forum for addressing these issues. The study puts in perspective the manifold ways in which the ILO has helped

structure these debates and has made - through its standard-setting, technical cooperation and myriad other activities - practical contributions to the world of work and to global social policy.

A magisterial intellectual history of the last century of American conservatism When most people think of the history of modern conservatism, they think of Ronald Reagan. Yet this narrow view leaves many to question: How did Donald Trump win the presidency? And what is the future of the Republican Party? In The Right, Matthew Continetti gives a sweeping account of movement conservatism's evolution, from the Progressive Era through the present. He tells the story of how conservatism began as networks of intellectuals, developing and institutionalizing a vision that grew over time, until they began to buckle under new pressures, resembling national populist movements. Drawing out the tensions between the desire for mainstream acceptance and the pull of extremism, Continetti argues that the more one studies conservatism's past, the more one becomes convinced of its future. Deeply researched and brilliantly told, The Right is essential reading for anyone looking to understand American conservatism.

The Decline of America offers a carefully documented analysis of the last seventeen U.S. presidents. These men, eight Democrats and nine Republicans, have shaped the last 100 years, not only for America, but for the world. Each president is profiled with unsparing scrutiny so we can see where it's all gone wrong. David Schein follows these critiques by proposing ways to improve America's outlook for the next 100 years—before it's too late.

From the man the Wall Street Journal describes as a 'global change guru', more than one hundred of the trends that touch every aspect of our lives. This new and updated edition looks even farther into the future, predicting trends past the first decades of the 22nd century. Patrick Dixon looks at how the future will be Fast, Urban, Tribal, Universal, Radical and Ethical - a future of boom and bust and great economic change as the emerging markets grow up; a future of great advances in medicine and also greater threats from viral epidemics; a future of political shocks and greater conflicts; a future in which people will strive for more privacy and businesses will change the way they relate to their staff and their customers; a future in which there will be driverless cars and solar power generated in the desert will power cities thousands of miles away. In this updated edition, Dixon shows how recent developments confirm his predictive scheme: Artificial intelligence and robotics - profound power and influence over our future world Beyond Brexit - the longer term future of the EU and UK The long-term impact of the MeToo movement The future of Truth - Fake News, propaganda and impact on democracy Presidential leadership - rise of powerful figureheads across the world, and potential future conflicts And in an entirely new chapter, Dixon extends his predictive horizon to see how the future will look one hundred years from now.

The founder and executive chairman of the World Economic Forum on how the impending technological revolution will change our lives We are on the brink of the Fourth Industrial Revolution. And this one will be unlike any other in human history. Characterized by new technologies fusing the physical, digital and biological worlds, the Fourth Industrial Revolution will impact all disciplines, economies and industries - and it will do so at an unprecedented rate. World Economic Forum data predicts that by 2025 we will see: commercial use of nanomaterials 200 times stronger than steel and a million times thinner than human hair; the first transplant of a 3D-printed liver; 10% of all cars on US roads being driverless; and much more besides. In The Fourth Industrial Revolution, Schwab outlines the key technologies driving this revolution, discusses the major impacts on governments, businesses, civil society and individuals, and offers bold ideas for what can be done to shape a better future for all.

How have the great states and empires of world history evolved their distinct identities and attitudes? And how do these shape global relations today? World Order is the summation of Henry Kissinger's thinking about statecraft, strategy, the fates of nations and tectonic plates of history. 'Exquisitely timed, deserves to be read . . . World order depends on it.' Lionel Barber, Financial Times 'Magisterial.' Jonathan Powell, Daily Telegraph 'A sage in the age of disorder.' Christopher Meyer, The Times 'Compelling, vintage Kissinger.' Hillary Rodham Clinton, Washington Post

'Kissinger is unique . . . this book is his summa diplomatica.' Paul Johnson, Spectator, Books of the Year

A startling 21st century detailed prophecy recorded in October 1997! Gain important prophetic "inside information" about 57 nations: read about upcoming revivals, wars, economic conditions, miracles, weather patterns, population shifts, natural disasters, investments, governments, world religions, plus much, much more!

One of the U.S. government's leading China experts reveals the hidden strategy fueling that country's rise – and how Americans have been seduced into helping China overtake us as the world's leading superpower. For more than forty years, the United States has played an indispensable role helping the Chinese government build a booming economy, develop its scientific and military capabilities, and take its place on the world stage, in the belief that China's rise will bring us cooperation, diplomacy, and free trade. But what if the "China Dream" is to replace us, just as America replaced the British Empire, without firing a shot? Based on interviews with Chinese defectors and newly declassified, previously undisclosed national security documents, *The Hundred-Year Marathon* reveals China's secret strategy to supplant the United States as the world's dominant power, and to do so by 2049, the one-hundredth anniversary of the founding of the People's Republic. Michael Pillsbury, a fluent Mandarin speaker who has served in senior national security positions in the U.S. government since the days of Richard Nixon and Henry Kissinger, draws on his decades of contact with the "hawks" in China's military and intelligence agencies and translates their documents, speeches, and books to show how the teachings of traditional Chinese statecraft underpin their actions. He offers an inside look at how the Chinese really view America and its leaders – as barbarians who will be the architects of their own demise. Pillsbury also explains how the U.S. government has helped – sometimes unwittingly and sometimes deliberately – to make this "China Dream" come true, and he calls for the United States to implement a new, more competitive strategy toward China as it really is, and not as we might wish it to be. *The Hundred-Year Marathon* is a wake-up call as we face the greatest national security challenge of the twenty-first century.

A major new book by New York Times bestselling author and geopolitical forecaster George Friedman (*The Next 100 Years*), with a bold thesis about coming events in Europe. This provocative work examines "flashpoints," unique geopolitical hot spots where tensions have erupted throughout history, and where conflict is due to emerge again. "There is a temptation, when you are around George Friedman, to treat him like a Magic 8 Ball." —*The New York Times Magazine* With remarkable accuracy, George Friedman has forecasted coming trends in global politics, technology, population, and culture. In *Flashpoints*, Friedman focuses on Europe—the world's cultural and power nexus for the past five hundred years . . . until now. Analyzing the most unstable, unexpected, and fascinating borderlands of Europe and Russia—and the fault lines that have existed for centuries and have been ground zero for multiple catastrophic wars—Friedman highlights, in an unprecedentedly personal way, the flashpoints that are smoldering once again. The modern-day European Union was crafted in large part to minimize built-in geopolitical tensions that historically have torn it apart. As Friedman demonstrates, with a mix of rich history and cultural analysis, that design is failing. *Flashpoints* narrates a living history of Europe and explains, with great clarity, its most volatile regions: the turbulent and ever-shifting land dividing the West from Russia (a vast area that currently includes Ukraine, Belarus, and Lithuania); the ancient borderland between France and Germany; and the Mediterranean, which gave rise to Judaism and Christianity and became a center of Islamic life. Through Friedman's seamless narrative of townspeople and rivers and villages, a clear picture of regions and countries and history begins to emerge. *Flashpoints* is an engrossing analysis of modern-day Europe, its remarkable past, and the simmering fault lines that have awakened and will be pivotal in the near future. This is George Friedman's most timely and, ultimately, riveting book.

Please note: This is a companion version & not the original book. Sample Book Insights: #1 The American people have a deep-seated belief that the United States is approaching its end. This is reflected in the letters pages of newspapers, the web, and public discourse. The American economy is so large that it is larger than the economies of the next four countries combined. #2 The United States is still underpopulated by global standards. It has plenty of room to increase all three of its components: land, labor, and capital. The American economy is so powerful because of its military power. #3 The United States is only at the beginning of its power. The twenty-first century will be the American century, and it has been forced to take on the role that European power occupied for five hundred years, between Columbus's voyage in 1492 and the fall of the Soviet Union in 1991. #4 Until the fifteenth century, humans lived in self-enclosed, sequestered worlds. But as the

European empires expanded, they brought the world together as a single entity. Europe became the center of gravity of the global system.

The author of the acclaimed New York Times bestseller *The Next 100 Years* now focuses his geopolitical forecasting acumen on the next decade and the imminent events and challenges that will test America and the world, specifically addressing the skills that will be required by the decade's leaders. In the long view, history is seen as a series of events—but the course of those events is determined by individuals and their actions. During the next ten years, individual leaders will face significant transitions for their nations: the United States' relationships with Iran and Israel will be undergoing changes, China will likely confront a major crisis, and the wars in the Islamic world will subside. Unexpected energy and technology developments will emerge, and labor shortages will begin to matter more than financial crises. Distinguished geopolitical forecaster George Friedman analyzes these events from the perspectives of the men and women leading these global changes, focusing in particular on the American president, who will require extraordinary skills to shepherd the United States through this transitional period. *The Next Decade* is a provocative and fascinating look at the conflicts and opportunities that lie ahead.

A new edition of the international bestseller (a #1 bestseller in Japan), featuring a new preface Does the thought of working for 60 or 70 years fill you with dread? Or can you see the potential for a more stimulating future as a result of having so much extra time? Many of us have been raised on the traditional notion of a three-stage approach to our working lives: education, followed by work and then retirement. But this well-established pathway is already beginning to collapse – life expectancy is rising, final-salary pensions are vanishing, and increasing numbers of people are juggling multiple careers. Whether you are 18, 45 or 60, you will need to do things very differently from previous generations and learn to structure your life in completely new ways. *The 100-Year Life* is here to help. Drawing on the unique pairing of their experience in psychology and economics, Lynda Gratton and Andrew Scott offer a broad-ranging analysis as well as a raft of solutions, showing how to rethink your finances, your education, your career and your relationships and create a fulfilling 100-year life. · How can you fashion a career and life path that defines you and your values and creates a shifting balance between work and leisure? · What are the most effective ways of boosting your physical and mental health over a longer and more dynamic lifespan? · How can you make the most of your intangible assets – such as family and friends – as you build a productive, longer life? · In a multiple-stage life how can you learn to make the transitions that will be so crucial and experiment with new ways of living, working and learning? Shortlisted for the FT/McKinsey Business Book of the Year Award and featuring a new preface, *The 100-Year Life* is a wake-up call that describes what to expect and considers the choices and options that you will face. It is also fundamentally a call to action for individuals, politicians, firms and governments and offers the clearest demonstration that a 100-year life can be a wonderful and inspiring one.

Activated Sludge - 100 Years and Counting covers the current status of all aspects of the activated sludge process and looks forward to its further development in the future. It celebrates 100 years of the Activated Sludge process, from the time that the early developers presented the seminal works that led to its eventual worldwide adoption. The book assembles contributions from renowned world leaders in activated sludge research, development, technology and application. The objective of the book is to summarise the knowledge of all aspects of the activated sludge process and to present and discuss anticipated future developments. The book comprises invited papers that were delivered at the conference "Activated Sludge...100 Years and Counting!", held in Essen, Germany, June 12th to 14th, 2014. *Activated Sludge - 100 Years and Counting* is of interest to researchers, engineers, designers, operations specialists, and governmental agencies from a wide range of disciplines associated with all aspects of the activated sludge process. Authors: David Jenkins, University of California at Berkeley, USA, Jiri Wanner, Institute of Chemical Technology, Prague, Czech Republic.

Briefly traces the 100-year history of the United Way, shows how the organization has supported the health and human care needs of Americans, and discusses its future and how it can help to build a more socially responsible citizenry

From robotic nurses to designer babies, the future of medicine may take some unbelievable twists and turns. Step into the future with Luna Li to find out how medical care may change in the next 100 years.--

Acclaimed New York Times journalist and author Chris Hedges offers a critical -- and fascinating -- lesson in the dangerous realities of our age: a stark look at the effects of war on combatants. Utterly lacking in rhetoric or dogma, this manual relies instead on bare fact, frank description, and a

spare question-and-answer format. Hedges allows U.S. military documentation of the brutalizing physical and psychological consequences of combat to speak for itself. Hedges poses dozens of questions that young soldiers might ask about combat, and then answers them by quoting from medical and psychological studies. · What are my chances of being wounded or killed if we go to war? · What does it feel like to get shot? · What do artillery shells do to you? · What is the most painful way to get wounded? · Will I be afraid? · What could happen to me in a nuclear attack? · What does it feel like to kill someone? · Can I withstand torture? · What are the long-term consequences of combat stress? · What will happen to my body after I die? This profound and devastating portrayal of the horrors to which we subject our armed forces stands as a ringing indictment of the glorification of war and the concealment of its barbarity.

Forty years ago, *The Limits to Growth* study addressed the grand question of how humans would adapt to the physical limitations of planet Earth. It predicted that during the first half of the 21st century the ongoing growth in the human ecological footprint would stop—either through catastrophic "overshoot and collapse"—or through well-managed "peak and decline." So, where are we now? And what does our future look like? In the book *2052*, Jorgen Randers, one of the coauthors of *Limits to Growth*, issues a progress report and makes a forecast for the next forty years. To do this, he asked dozens of experts to weigh in with their best predictions on how our economies, energy supplies, natural resources, climate, food, fisheries, militaries, political divisions, cities, psyches, and more will take shape in the coming decades. He then synthesized those scenarios into a global forecast of life as we will most likely know it in the years ahead. The good news: we will see impressive advances in resource efficiency, and an increasing focus on human well-being rather than on per capita income growth. But this change might not come as we expect. Future growth in population and GDP, for instance, will be constrained in surprising ways—by rapid fertility decline as result of increased urbanization, productivity decline as a result of social unrest, and continuing poverty among the poorest 2 billion world citizens. Runaway global warming, too, is likely. So, how do we prepare for the years ahead? With heart, fact, and wisdom, Randers guides us along a realistic path into the future and discusses what readers can do to ensure a better life for themselves and their children during the increasing turmoil of the next forty years.

One of Bloomberg's Best Books of the Year The master geopolitical forecaster and New York Times bestselling author of *The Next 100 Years* focuses on the United States, predicting how the 2020s will bring dramatic upheaval and reshaping of American government, foreign policy, economics, and culture. In his riveting new book, noted forecaster and bestselling author George Friedman turns to the future of the United States. Examining the clear cycles through which the United States has developed, upheaved, matured, and solidified, Friedman breaks down the coming years and decades in thrilling detail. American history must be viewed in cycles—particularly, an eighty-year "institutional cycle" that has defined us (there are three such examples—the Revolutionary War/founding, the Civil War, and World War II), and a fifty-year "socio-economic cycle" that has seen the formation of the industrial classes, baby boomers, and the middle classes. These two major cycles are both converging on the late 2020s—a time in which many of these foundations will change. The United States will have to endure upheaval and possible conflict, but also, ultimately, increased strength, stability, and power in the world. Friedman's analysis is detailed and fascinating, and covers issues such as the size and scope of the federal government, the future of marriage and the social contract, shifts in corporate structures, and new cultural trends that will react to longer life expectancies. This new book is both provocative and entertaining.

The international bestselling author of *Physics of the Impossible* gives us a stunning and provocative vision of the future Based on interviews with over three hundred of the world's top scientists, who are already inventing the future in their labs, Kaku—in a lucid and engaging fashion—presents the revolutionary developments in medicine, computers, quantum physics, and space travel that will forever change our way of life and alter the course of civilization itself. His astonishing revelations include: The Internet will be in your contact lens. It will recognize people's faces, display their biographies, and even translate their words into subtitles. You will control computers and appliances via tiny sensors that pick up your brain scans. You will be able to rearrange the shape of objects. Sensors in your clothing, bathroom, and appliances will monitor your vitals, and nanobots will scan your DNA and cells for signs of danger, allowing life expectancy to increase dramatically. Radically new spaceships, using laser propulsion, may replace the expensive chemical rockets of today. You may be able to take an elevator hundreds of miles into space by simply pushing the "up" button. Like *Physics of the Impossible* and *Visions before it*, *Physics of the Future* is an exhilarating, wondrous ride through the next one hundred years of breathtaking scientific revolution. In-

ternationally acclaimed physicist Dr Michio Kaku holds the Henry Semat Chair in Theoretical Physics at the City University of New York. He is also an international bestselling author, his books including *Hyperspace* and *Parallel Worlds*, and a distinguished writer, having featured in *Time*, the *Wall Street Journal*, the *Sunday Times* and the *New Scientist* to name but a few. Dr Kaku also hosts his own radio show, 'Science Fantastic', and recently presented the BBC's popular series 'Time'.

- Meet the amazing women who have made the legal profession their own- The first book to tell the story for a general audience- Published in partnership with the First 100 Years, the national campaign set up to celebrate the centenary of the 1919 Sex Disqualification (Removal) Act- The story is brought to life with photographs, archive material, boxed-out features, anecdotes and quotations- When Helena Normanton was admitted to Middle Temple on 24 December 1919, she became the first woman to enter this traditional male preserve, setting in train a series of firsts for women in law which continue today. The day before, the passing of the Sex Disqualification (Removal) Act had made it possible, for the first time, for women to enter the legal profession. Marking the centenary of the Act, First tells the story of women in law in their first 100 years of practice. From early campaigners through to the first women solicitors, barristers, magistrates and judges, the book tells the often untold stories of the pioneers, reformers and influencers who paved the way, revealing the barriers they faced, their challenges and triumphs. It offers a unique insight into how women have succeeded in a profession still dominated by men, and looks ahead to the prospects for women in law in the next 100 years.

If you thought your parenting responsibilities ended after eighteen years per child, you thought wrong. Instead, it's your privilege to lead your family-and influence succeeding generations-for a century...or more. *Anchor Man* presents the high calling of fatherhood, the traits of a Christian father, the adventures that await him as he interacts with his children, and the significance of his role as a good family man. Steve Farrar presents these roles and responsibilities in a way any man

wanting to increase his understanding of his place in the family, and our society, can put into action every day. *Anchor Man* encourages, exhorts, and demonstrates with biblical concepts how to raise a godly family and how to anchor that family in Christ for the next one hundred years. Farrar's unique teaching style blends humor and practicality with the tools fathers need to become all that God intended them to be as the leaders of their families. "When a man gets serious about following Christ with his whole heart," Farrar says, "God desires to not only pour out His blessing on that man, but on his children, and his children's children.

"The ongoing COVID-19 pandemic marks the most significant, singular global disruption since World War II, with health, economic, political, and security implications that will ripple for years to come." -*Global Trends 2040 (2021) Global Trends 2040-A More Contested World (2021)*, released by the US National Intelligence Council, is the latest report in its series of reports starting in 1997 about megatrends and the world's future. This report, strongly influenced by the COVID-19 pandemic, paints a bleak picture of the future and describes a contested, fragmented and turbulent world. It specifically discusses the four main trends that will shape tomorrow's world: - Demographics-by 2040, 1.4 billion people will be added mostly in Africa and South Asia. - Economics-increased government debt and concentrated economic power will escalate problems for the poor and middleclass. - Climate-a hotter world will increase water, food, and health insecurity. - Technology-the emergence of new technologies could both solve and cause problems for human life. Students of trends, policymakers, entrepreneurs, academics, journalists and anyone eager for a glimpse into the next decades, will find this report, with colored graphs, essential reading.

The author examines the threat of the greenhouse effect on the planet, the hole in the ozone layer, and the decimation of forests, and details the steps necessary to reverse these disasters. Imagining the history of the twenty-first century through its artifacts, from silent messaging systems to artificial worlds on asteroids. In the year 2082, a curator looks back at the twenty-first cen-

tury, offering a history of the era through a series of objects and artifacts. He reminisces about the power of connectivity, which was reinforced by such technologies as silent messaging—wearable computers that relay subvocal communication; recalls the Fourth Great Awakening, when a regimen of pills could make someone virtuous; and notes disapprovingly the use of locked interrogation, which delivers “enhanced interrogation” simulations via virtual reality. The unnamed curator quotes from a self-help guide to making friends with “posthumans,” describes the establishment of artificial worlds on asteroids, and recounts pro-democracy movements in epistocratic states. In *A New History of the Future in 100 Objects*, Adrian Hon constructs a possible future by imagining the things it might leave in its wake. Many of these things are just an update or two away: improved ankle monitors, for example, and deliverbots. Others may be the logical conclusions of current trends—“downvote” networks that identify and erase undesirables, and Glyphish, an emotion-based language that supersedes the written word. More benign are Braid Collective, which provides financial support for artists, and Rechartered Cities, which invites immigrants to revitalize urban areas hollowed out by changing demographics. With this engaging and ingenious work, Hon leads the way into an imagined future while offering readers a new perspective on the present.

Mexico making a bid for global supremacy? Poland becoming America's closest ally? World War III taking place in space? It might sound fantastic but all these things can happen. In "The Next 100 Years", George Friedman, author of the huge bestseller "America's Secret War" offers a lucid, highly readable forecast of the changes we can expect around the world during the 21st century. He predicts where and why future wars will erupt, and how they will be fought; which nations will gain and lose economic and political power; and how new technologies and cultural trends will alter the way we live in the new century.

Yedigei looks back on his life as he brings the body of a close friend across the steppes of Central Asia to be buried in an ancient cemetery
