Discover the definitive history of DARPA, the Defense Advanced Research Project Agency, in this Pulitzer Prize finalist from the author of the New York Times bestseller Area 51. In the first-ever history about the organization, New York Times bestselling author Annie Jacobsen draws on inside sources, exclusive interviews, private documents, and declassified memos to paint a picture of DARPA, or "the Pentagon's brain," from its Cold War inception in 1958 to the present. This is the book on DARPA -- a compelling narrative about this clandestine intersection of science and the American military and the often frightening results.

In this New York Times bestselling investigation, Ted Koppel reveals that a major cyberattack on America's power grid is not only possible but likely, that it would be devastating, and that the United States is shockingly unprepared. Imagine a blackout lasting not days, but weeks or months. Tens of millions of people over several states are affected. For those without access to a generator, there is no running water, no sewage, no refrigeration or light. Food and medical supplies are dwindling. Devices we rely on have gone dark. Banks no longer function, looting is widespread, and law and order are being tested as never before. It isn't just a scenario. A well-designed attack on just one of the nation's three electric power grids could cripple much of our infrastructure--and in the age of cyberwarfare, a laptop has become the only necessary weapon. Several nations hostile to the United States could launch such an assault at any time. In fact, as a former chief scientist of the NSA reveals, China and Russia have already penetrated the grid. And a cybersecurity advisor to President Obama believes that independent actors--from "hacktivists" to terrorists--have the capability as well. "It's not a question of if," says Centcom Commander General Lloyd Austin, "it's a question of when." And yet, as Koppel makes clear, the federal government, while well prepared for natural disasters, has no plan for the aftermath of an attack on the power grid. The current Secretary of Homeland Security suggests keeping a battery-powered radio. In the absence of a government plan, some individuals and communities have taken matters into their own hands. Among the nation's estimated three million "preppers," we meet one whose doomsday retreat includes a newly excavated three-acre lake, stocked with fish, and a Wyoming homesteader so self-sufficient that he crafted the thousands of adobe bricks in his house by hand. We also see the unrivaled disaster preparedness of the Mormon church, with its enormous storehouses, high-tech dairies, orchards, and proprietary trucking company -- the fruits of a long tradition of anticipating the worst. But how, Koppel asks, will ordinary civilians survive? With urgency and authority, one of our most renowned journalists examines a threat unique to our time and evaluates potential ways to prepare for a catastrophe that is all but inevitable.

It is one of the most extraordinary cases in the history of science: the mating calls of insects were mistaken for a "sonic weapon" that led to a major diplomatic row. Since August 2017, the world media has been absorbed in the "attack" on diplomats from the American and Canadian Embassies in Cuba. While physicians treating victims have described it as a novel and perplexing condition that involves an array of complaints including brain damage, the authors present compelling evidence that

mass psychogenic illness was the cause of "Havana Syndrome." This mysterious condition that has baffled experts is explored across 11-chapters which offer insights by a prominent neurologist and an expert on psychogenic illness. A lively and enthralling read, the authors explore the history of similar scares from the 18th century belief that sounds from certain musical instruments were harmful to human health, to 19th century cases of "telephone shock," and more contemporary panics involving people living near wind turbines that have been tied to a variety of health complaints. The authors provide dozens of examples of kindred episodes of mass hysteria throughout history, in addition to psychosomatic conditions and even the role of insects in triggering outbreaks. Havana Syndrome: Mass Psychogenic Illness and the Real Story Behind the Embassy Mystery and Hysteria is a scientific detective story and a case study in the social construction of mass psychogenic illness.

For the first time in history, the Middle East has united as one and amassed the most formidable army the world has seen since the Third Reich. A hidden army of terrorists are on American soil. This is the story of three men - Howard Beck, the world's richest man, also diagnosed with Asperger's Syndrome, Richard Dupree, ex-Navy SEAL turned escaped convict, and Maxwell Harris, a crippled, burned out Chief of Police of a small Texas town. At first they must fight for their own survival against impossible odds. Finally, the three men must band together to save their beloved country from collapse.

Tin Men by Christopher Golden - author of Snowblind - is a must-read for fans of Dean Koontz, Peter Straub and Joe Hill thanks to its high concept and jaw-dropping thrills. Economies are collapsing, environmental disasters are widespread and war the backdrop to life. And so the military has developed a force of elite soldiers to keep the peace. A force like nothing seen before ... codenamed Tin Men, soldiers are virtually transported to inhabit robot frames in war-torn countries. When PFC Danny Kelso starts his day shift in Syria, an eerie silence welcomes him and a patrol confirms the area is totally deserted. But when a rogue electromagnetic pulse throws everything into darkness, Danny's conscious mind is trapped within his robot body. The attack turns out to have been global - the world is facing a return to the dark ages with no electricity, no technology ... no safe zones. And the Tin Men face a race against time to save not only themselves but society as we know it.

The future is likely to witness a growing number of mass-destruction acts carried out by ideologically motivated, loosely organized, terrorist networks that operate independently of state sponsorship and have access to the funding, materials, and increasing technological sophistication. While there is agreement on the possible consequences of super terrorism, there has been robust disagreement on the kind of investment that should be made in preparedness and response to biological, chemical, and nuclear terrorist attacks.

A major release in the New York Times bestselling One Second After series, set in an alternate America rebuilding after an electromagnetic pulse, this is William R. Forstchen's The Final Day. It's been more than two years since an EMP attack wiped out all electricity in the United States and plunged the country into darkness, starvation, and death. After fighting their fair share of battles in their North Carolina mountain town, John Matherson and the people in his community are beginning to restore the technologies and social order that existed prior to the EMP. Then the national government announces that it's ceding large portions of the country to China and Mexico; that the Constitution is no longer in effect; and that what's left of the US Army has been deployed to suppress rebellion in the remaining states. The man sent to confront John Matherson is General Bob Scales, Matherson's old commanding officer and closest friend from prewar days. Will General Scales follow orders, or might he be the crucial turning point in the quest for a re-united America? When news breaks that members of the federal government knew the EMP attack was coming long before it hit, the government might get exactly what it fears: revolution.

An EMP leaves a small northeastern town in ruins, with no assistance from the government, military, or law enforcement. As a result, a ruthless band of criminals take over the town and terrorize its residents. But one town isn't enough as they set their sights on a hidden community of preppers who fled into the mountains.
