The Water Footprint Assessment Manual - World Bank

The Water Footprint Assessment Manual

The water footprint is the amount of water consumed by human activity as well as the assimilation capacity used (the ability of a body of water to cleanse itself). It is not only measures the water we use from the tap, but the 'hidden' water used to produce our food, energy, clothes, cars and other items.

The manual contains a complete, consistent and up-to-date overview of the method of water footprint assessment. This report offers such a manual. It covers a comprehensive set of methods for water footprint accounting. It shows how water footprints can be calculated for individual processes and products, as well as for consumers, nations and businesses.
