Foundations of mathematics is the study of the philosophical and logical and/or algorithmic basis of mathematics, or, in a

broader sense, the mathematical investigation of what underlies the philosophical theories concerning the nature of mathematics. In this latter sense, the distinction between foundations of mathematics and philosophy of mathematics turns out to be quite vague.

The Foundations of Mathematics provides a careful introduction to proofs in mathematics, along with basic concepts of logic, set theory and other broadly used areas of mathematics. The concepts are introduced in a pedagogically

effective manner without compromising mathematical accuracy and completeness. Thus, in Part I students explore concepts before they use them in proofs.
