Cultural traditions do adversely affect the education of many people in the world. Women are, unfortunately, the most affected victims of their culture. This book demonstrates how cultural traditions can militate against the education of women in Zambia with a focus on the Tumbuka tribe. The evidence at hand demonstrates that patrilineal groupings are strongholds of the patriarchal predisposition and patriarchal attitudes and cultural traditions do not recognize women as equal partners with men. The Tumbuka women's experiences and beliefs reflect socio-cultural traditional norms that tend to limit gender equality, and compel women to accept and justify male domination at the expense of their own status and to regard consequent inequalities as normal. Evidence demonstrates that the initiation rites, an active institution for girls of pubescent age, interfere more with the school-based education

of girls. The women are active social agents as well as passive learners who will not allow the girls they are coaching to question the purpose for some traditional practices that are oppressive and directly cause them to fail to complete their schooling successfully.

This volume reflects a number of research streams on the development of computer systems and software that makes it possible to employ them in a variety of human activities ranging from logic studies and artificial intelligence, rule-based control of technological processes, image analysis, expert systems and decision support, to assistance in creative works. In particular, the volume points to a number of new advances in man-machine communication, interaction between visualization and modeling, rough granular computing in human-centric information processing and the discovery of affinities between perceptual granules. The topical

subdivisions of this volume include human-computer interactions, decision support, rough fuzzy investigations, advances in classification methodology, pattern analysis and signal processing, computer vision and image analysis, advances in algorithmics, databases and data warehousing, and embedded system applications.

Frank Keil's *Developmental Psychology* represents his vision of how psychology should be taught and is based on nearly four decades of teaching a lecture course in developmental psychology and conducting developmental research. With a cohesive narrative, clear art program, and carefully crafted pedagogy, the book guides students through material that is as rich as it is intriguing. Keil's narrative reflects his passion for engaging students' intellectual curiosity with an analytical approach that explores the big questions, links theory with evidence, and treats developmental psychology as a science. *Developmental Psychology* invites readers to celebrate the beauty and to understand the depth of psychological development.

Dynamic author team provides comprehensive overview with focus on critical-thinking. The fifth edition continues a heavy focus on applying critical thinking framework in examining, analyzing, and evaluating psychological data. With significant rewriting and additional new topics as well as updated references on new research, *Cross-Cultural Psychology* keeps pace with the rapidly changing conditions of modern times. The dynamic team from two different worlds bring a unique set of experiences and perceptions in writing this book. Eric Shiraev was raised in the city of Leningrad in the former Soviet Union and David Levy is from Southern California,. Between the diverse backgrounds and hav-

ing each author spent an extended period teaching in the other's home country, the authors provide a comprehensive review of theories and research in cross-cultural psychology. Learning Goals Upon completing this book, readers should be able to: Better understand the field of cross-cultural psychology Understand contemporary theories and research in cross-cultural psychology Use critical thinking to examine, analyze, and evaluate the field of cross-cultural psychology Assist current and future practitioners from a wide variety of fields and services

This unique and ground-breaking book is the result of 15 years research and syntheses over 800 meta-analyses on the influences on achievement in school-aged students. It builds a story about the power of teachers, feedback, and a model of learning and understanding. The research involves many millions of students and represents the largest ever evidence based research into what actually works in schools to improve learning. Areas covered include the influence of the student, home, school, curricula, teacher, and teaching strategies. A model of teaching and learning is developed based on the notion of visible teaching and visible learning. A major message is that what works best for students is similar to what works best for teachers – an attention to setting challenging learning intentions, being clear about what success means, and an attention to learning strategies for developing conceptual understanding about what teachers and students know and understand. Although the current evidence based fad has turned into a debate about test scores, this book is about using evidence to build and defend a model of teaching and learning. A major contribution is a fascinating benchmark/dashboard for com-

paring many innovations in teaching and schools.

"Psychological tests and other tools of assessment may differ with respect to a number of variables, such as content, format, administration procedures, scoring and interpretation procedures, and technical quality. The content (subject matter) of the test will, of course, vary with the focus of the particular test. But even two psychological tests purporting to measure the same thing—for example, personality—may differ widely in item content. This is so because two test developers might have entirely different views regarding what is important in measuring "personality"; different test developers employ different definitions of "personality." Additionally, different test developers come to the test development process with different theoretical orientations"--

Human cognitive processes and defense mechanisms, as described in psychoanalysis, bring about new notions and paradigms for artificial intelligence systems. One key reason is that the human cognitive processes and defense mechanisms in question can accomplish conflict detection functionalities, filter functionalities, and other system stabilizing tasks within artificial intelligence systems. Yet artificial cognitive architectures lack the capability to analyze complex situations as well as the universal competencies needed to orientate themselves in complex environments in various domains. Psychoanalytic Defense Mechanisms in Cognitive Multi-Agent Systems addresses this dilemma by exploring how to describe, model, and implement psychoanalytic defense mechanisms in the course of a project that provides a functional model of the human mind. With discussions focusing on the development of a mathematical description for the implementation of conflict detection, the activation and selection of de-

fense mechanisms, and the processing of defense mechanisms, Psychoanalytic Defense Mechanisms in Cognitive Multi-Agent Systems describes the decisive points for the application of defense mechanisms in artificial intelligence. Formulae that treat defense mechanisms as transformations are also provided. Interdisciplinary cooperation between the scientific fields of psychoanalysis and artificial intelligence is highlighted as the foundation of new research findings throughout the book. Innovative and exciting, this book will be of great interest to academics, researchers, and postgraduates in the fields of cognitive science, artificial intelligence, and psychoanalysis.

As an annual event, International Conference on Religion and Mental Health (ICRMH) 2019 continued the agenda to bring together researcher, academics, experts and professionals in examining selected theme by applying multidisciplinary approaches. In 2019, this event will be held in 18-19 September at Auditorium Faculty of Psychology, Syarif Hidayatullah State Islamic University, Jakarta. The conference from any kind of stakeholders related with Religion, Psychology, Social-Political and Social Related Studies. Each contributed paper was refereed before being accepted for publication. The double-blind peer reviewed was used in the paper selection.

This 7th Edition helps students unravel the mysteries of human behavior through its highly readable introduction to the ideas of the most significant personality theorists. Engaging biographical sketches begin each chapter, and unique capsule summaries help students review key concepts. Theories come alive through the inclusion of quotations from the theorists' writings and numerous

applications such as dream interpretation, psychopathology, and psychotherapy. Significant changes in the 7th edition include an extended discussion of the practical applications of personality theory, with an emphasis on guidelines that can help people increase their self-knowledge, make better decisions, and live more fulfilling lives. Fictionalized but true-to-life examples illustrating the perils of inadequate self-knowledge include college students, parents, terrorists, business executives, and politicians, while other examples show the positive outcomes that can result from a better understanding of one's unconscious. This 7th edition also includes a more extensive discussion of how a lack of self-understanding caused difficulties for such noted theorists as Freud and Erikson, and a new section that explains how behavior can be strongly influenced by the situation as well as by one's personality. Finally, a new interactive web site provides practice test questions and other topics of interest.

Tavistock Press was established as a co-operative venture between the Tavistock Institute and Routledge & Kegan Paul (RKP) in the 1950s to produce a series of major contributions across the social sciences. This volume is part of a 2001 reissue of a selection of those important works which have since gone out of print, or are difficult to locate. Published by Routledge, 112 volumes in total are being brought together under the name The International Behavioural and Social Sciences Library: Classics from the Tavistock Press. Reproduced here in facsimile, this volume was originally published in 1955 and is available individually. The collection is also available in a number of themed mini-sets of between 5 and 13 volumes, or as a complete collection.

The Association of Southeast Asian Institutions of Higher Learning (ASAIHL) has been playing an important role in educational development to promote innovative teaching, research and coopera-

tion among institutions of higher learning. Build Bright University (BBU), Cambodia had organized the 2015 ASAIHL International Conference during 2-4 December at Siem Reap. The main theme of the conference was “Educational Access and Excellence”. The conference covered three sub-themes, namely, (i) cross-border higher education in global context, (ii) excellence in education through provision of technology, effective teaching and research, and (iii) student learning outcomes. Delegates from France, UK, Japan, Singapore, Hong Kong, India, Thailand, Malaysia, Philippines, Vietnam, Taiwan, East Timor, Cambodia and others had participated in the conference.

The 7th edition of this trusted introduction to personality centers on the premise that personality theories are a reflection of the unique cultural background, family experiences, personalities, and professional training of their originators. The book begins by acquainting students with the meaning of personality and providing them with a solid foundation for understanding the nature of theory, as well as its crucial contributions to science. The chapters that follow present twenty-three major theories: coverage of each theory also encompasses a biographical sketch of each theorist, related research, and applications to real life. The primary focus of this revision was updating the theory chapters to reflect the most recent research.

Thoroughly updated to include the latest research available, THEORIES OF PERSONALITY, 10E takes a unique theory by theory approach that carefully guides students through major theories on their way to a comprehensive understanding of personality. Richard Ryckman's student-friendly writing style offers a straight-

forward presentation of major theories, helping readers more easily distinguish between them. The text begins by providing a framework that defines personality and emphasizes the science of personality--including the interrelation between research and theory. Next it introduces each major theoretical position with an objective overview of the theorist's basic concepts and principles. It concludes by noting the ways in which the different theories stimulate additional research efforts and by presenting five current research trends resulting from the work of these earlier theorists. The result is a text that merges the best of classic and contemporary research to equip students with a solid working knowledge of personality. The charisma of prophecy is found throughout the history of the global Pentecostal movement. Within the movement, prophecy is seen as the communication of an inspired, spontaneous revelation, bringing edification to the faith community. Despite its prevalence, academic research has mostly focused on the biblical-theological aspect, neglecting the actual contemporary practice. This book addresses this gap with a study on the practice of prophecy within the Assemblies of God of Singapore. The book investigates the nature, purpose, and significance of the phenomenon. It also identifies theological variables that are correlated with its practice and explicates these relationships. The investigation employs the empirical-theological method of Johannes van der Ven, utilizing both a qualitative and a quantitative study. The results provide a rich description of the actual reception, delivery, and judging of prophecy. Significant findings include relationships be-

tween prophecy and courage, love, personality types, prayer types, and evangelism.

Harry Stack Sullivan (1892-1949) has been described as 'the most original figure in American psychiatry'. Challenging Freud's psychosexual theory, Sullivan founded the interpersonal theory of psychiatry, which emphasized the role of interpersonal relations, society and culture as the primary determinants of personality development and psychopathology. This concise and coherent account of Sullivan's work and life invites the modern audience to rediscover the provocative, groundbreaking ideas embodied in Sullivan's interpersonal theory and psychotherapy.

The Oxford Handbook of Undergraduate Psychology Education is dedicated to providing comprehensive coverage of teaching, pedagogy, and professional issues in psychology. The Handbook is designed to help psychology educators at each stage of their careers, from teaching their first courses and developing their careers to serving as department or program administrators. The goal of the Handbook is to provide teachers, educators, researchers, scholars, and administrators in psychology with current, practical advice on course creation, best practices in psychology pedagogy, course content recommendations, teaching methods and classroom management strategies, advice on student advising, and administrative and professional issues, such as managing one's career, chairing the department, organizing the curriculum, and conducting assessment, among other topics. The primary audience for this Handbook is college and university-level psychology teachers (at both two and four-year institutions) at the assistant, associate, and full professor levels, as well as department

chairs and other psychology program administrators, who want to improve teaching and learning within their departments. Faculty members in other social science disciplines (e.g., sociology, education, political science) will find material in the Handbook to be applicable or adaptable to their own programs and courses.

Social problems in many domains, including health, education, social relationships, and the workplace, have their origins in human behavior. The documented links between behavior and social problems have compelled governments and organizations to prioritize and mobilize efforts to develop effective, evidence-based means to promote adaptive behavior change. In recognition of this impetus, The Handbook of Behavior Change provides comprehensive coverage of contemporary theory, research, and practice on behavior change. It summarizes current evidence-based approaches to behavior change in chapters authored by leading theorists, researchers, and practitioners from multiple disciplines, including psychology, sociology, behavioral science, economics, philosophy, and implementation science. It is the go-to resource for researchers, students, practitioners, and policy makers looking for current knowledge on behavior change and guidance on how to develop effective interventions to change behavior.

This bestselling text presents research about gender and helps students think critically about the differences between research findings and gender stereotypes. It examines the biology and social context in which women and men express gendered behaviors. Defining gender as the behaviors and attitudes that relate to (but are not entirely congruent with) biological sex, the book focuses on research and scholarship to provide the material for a critical review and an overall picture of gender from a psy-

chological perspective. To highlight how research findings can relate to people's lives, the book supplements the review of scholarly research with personal, narrative accounts of gender-relevant aspects of people's lives. To emphasize the cross-cultural perspective of gender, the book including a section on diversity in most chapters but also weaves diversity issues throughout the text. The personal narrative and diversity highlights help to balance the research-based scholarship with the personal experience of gender.

The 8th edition of *Theories of Personality* follows in the tradition of the previous versions, by centering on the premise that personality theories are a reflection of the unique cultural background, family experiences, personalities, and professional training of their originators. The book begins by acquainting students with the meaning of personality and providing them with a solid foundation for understanding the nature of theory, as well as its crucial contributions to science. The chapters that follow present twenty-three major theories: coverage of each theory also encompasses a biographical sketch of each theorist, related research, and applications to real life. Changes in the 8th edition included a new chapter 8 on evolutionary personality theory, focusing on the work of David Buss. The Related Research sections in each chapter have also been updated.

[The book] is designed both to explain the major personality theories and to stimulate critical thinking about them. [The author] has pursued four main objectives. To present a clear and concise picture of the major features of each important personality theory ... To focus on significant ideas and themes that structure the con-

tent of the different personality theories ... To provide criteria to guide the evaluation of each theory ... To present activities, informed by the tenets of each theory, that will provide growth in critical thinking skills. -Pref.

'Essential Personality' provides a clear, accessible and systematic introduction to the major theoretical approaches for the understanding of human personality. This introductory book assumes no prior knowledge of this core area in psychology and is written for students studying personality for the first time, whether at 'A' level, first year undergraduates on psychology degree programmes or students on other courses (for example, nursing, social work or criminology). Each chapter considers one or more of the major approaches to personality. For each approach, a brief biographical outline of the originating theorist is given. This is followed by clear and straightforward descriptions of the major aspects of each theory together with clear definitions of key concepts, and concludes with an evaluation section that addresses the 'model' of humans underlying the approach, research evidence in support of the theory and questioning the theory. Discussion is also given to personality assessment and therapeutic applications of the theory or approach. The individual chapters provide figures, diagrams and tables to give a clear understanding of theory and research. and at the end of each chapter, a summary and suggestions for further reading is provided. A glossary at the end of the book provides definitions and explanations of key items, concepts etc.

An engaging and thought-provoking textbook which introduces and reviews the main methods and constructs used to assess people at work.

Personality Theories: A Global View by leading scholar Eric Shiraev takes a dynamic, integrated, and cross-cultural approach to the study of personality. The text is organized around three general questions: Where did personality theories come from? How did the theorists study facts? How do we apply personality theories now? These questions provide a consistent focus on social context, interdisciplinary science, and applications. Going beyond traditional research from the Western tradition, the book also covers theories and studies rooted in the experiences of other countries and cultures.

A comprehensive, clearly written text designed for undergraduate courses in introductory personality. Describes and interprets the major theories of personality. Emphasizes each theory's significance and application. Includes figures, tables, summaries, and boxed inserts featuring biographies and applications of theory to research.

Explores the practice of meditation and mindfulness, providing accounts of the cognitive and emotional processes elicited in meditation.

This revision of the Schultz's popular text surveys the field, presenting theory-by-theory coverage of the major theorists who represent the psychoanalytic, neopsychoanalytic, life-span, trait, humanistic, cognitive, behavioral, and social-learning approaches, as well as clinical and experimental work. Where warranted, the authors show how the development of certain theories was influenced by events in a theorist's personal and professional life. This thoroughly revised Seventh Edition now incorporates more examples, tables, and figures to help bring the material to life for

students. The new content in this edition reflects the dynamism in the field. The text explores how race, gender, and culture issues figure in the study of personality and in personality assessment. In addition, a final integrative chapter looks at the study of personality theories and suggests conclusions that can be drawn from the many theorists' work.

"What makes people behave as they do? Are people ordinarily aware of what they are doing, or are their behaviors the result of hidden, unconscious motives? Are some people naturally good and others basically evil? Or do all people have potential to be either good or evil? Is human conduct largely a product of nature, or is it shaped mostly by environmental influences? Can people freely choose to mold their personality, or are their lives determined by forces beyond their control? Are people best described by their similarities, or is uniqueness the dominant characteristic of humans? What causes some people to develop disordered personalities whereas others seem to grow toward psychological health? These questions have been asked and debated by philosophers, scholars, and religious thinkers for several thousand years; but most of these discussions were based on personal opinions that were colored by political, economic, religious, and social considerations. Then, near the end of the 19th century, some progress was made in humanity's ability to organize, explain, and predict its own actions. The emergence of psychology as the scientific study of human behavior marked the beginning of a more systematic approach to the study of human personality. This edition continues to emphasize the strong and unique features of earlier editions, namely the overviews near the beginning of each chapter, a lively writing style, the thought-provoking concepts of

humanity as seen by each theorist, and the structured evaluations of each theory"--

Theories of Personality provides a comprehensive foundation on the nature of personality theory, as well as its contributions to science. Coverage of each theory encompasses a biographical sketch of each theorist, related research, and applications to real life. Written by three preeminent psychology professors—Jess Feist, Gregory J. Feist, and Tomi-Ann Roberts—this program is engaging and student-friendly. The ninth edition provides new studies and sections on topics such as ego identity, gender studies, mindfulness and self-actualization, and more. The Connect course for this offering includes SmartBook, an adaptive reading and study experience which guides students to master, recall, and apply key concepts while providing automatically-graded assessments. McGraw-Hill Connect® is a subscription-based learning service accessible online through your personal computer or tablet. Choose this option if your instructor will require Connect to be used in the course. Your subscription to Connect includes the following:

- SmartBook® - an adaptive digital version of the course textbook that personalizes your reading experience based on how well you are learning the content.
- Access to your instructor's homework assignments, quizzes, syllabus, notes, reminders, and other important files for the course.
- Progress dashboards that quickly show how you are performing on your assignments and tips for improvement.

Accurate and authoritative, Theories of Personality by Jess and Gregory Feist presents 23 leading theories of personality in a thorough, interesting and logical manner. The book begins with an introductory chapter designed to acquaint students with the meaning of personality and provide them with a solid foundation for understanding the nature of theory and its crucial contributions to science. The next seventeen chapters present twenty-three major theories with a fresh approach and a more complete view encompassing, a biographical sketch of each theorist, related research and applications to real life. When appropriate, the authors point out ways in which the theorists' life experiences may have helped shape her or his theory.

This unique workbook was written for the undergraduate Personality course where professors are looking for activities to help students learn and apply personality theories to real-life examples. The workbook is geared toward personality courses that are theories-based, as opposed to research-based. Because the cases explored are those based on normal behavior (as opposed to abnormal behavior), this workbook is especially useful. While most personality texts present the major concepts of personality theories, they don't help students apply the theories they have learned or to use the theories to understand other examples on their own. This workbook will help students do just that and is the perfect complement to any Personality text.

Each one of us holds tremendous personal and spiritual worth. Yet so many people have never been cherished to the depth of their greatest potential. Within every soul lies a dying ember in search of the light of our existence. We are born and live in the garden of good and evil, separated by our Creator, fighting unseen battles that are impossible to conquer based on our own natural ability. Many of us turn to destructive methods to feed our hungry, searching soul. We strive for encouragement and acceptance, yet sometimes we are met with pain, rejection, discouragement, and injury. "And do not be conformed to this world, but be transformed by the renewing of your mind, that you may prove what is that good and acceptable and perfect will of God" (Romans 12:2 NKJV) Written within these pages is the testimony of a determined young woman who refused to accept the harsh reality dealt to her. Through tenacity as a mother, she finally discovered the supernatural transforming power of being reunited with her Creator, and her soul was ignited by the Savior of her destiny. LaNette embraced the wisdom and knowledge held within God-breathed Scripture and internalized the absolute truth. She clearly reveals the generational strongholds and family behavioral patterns that can destroy us, relationships, and squelch our God-given purpose, gifts, and talents.

"Character" has become a front-and-center topic in contemporary discourse, but this term does not have a fixed meaning. Character may be simply defined by what someone does not do, but a more active and thorough definition is necessary, one that addresses certain vital questions. Is character a singular characteristic of an individual, or is it composed of different aspects? Does character--however we define it--exist in degrees, or is it simply

something one happens to have? How can character be developed? Can it be learned? Relatedly, can it be taught, and who might be the most effective teacher? What roles are played by family, schools, the media, religion, and the larger culture? This groundbreaking handbook of character strengths and virtues is the first progress report from a prestigious group of researchers who have undertaken the systematic classification and measurement of widely valued positive traits. They approach good character in terms of separate strengths-authenticity, persistence, kindness, gratitude, hope, humor, and so on--each of which exists in degrees. Character Strengths and Virtues classifies twenty-four specific strengths under six broad virtues that consistently emerge across history and culture: wisdom, courage, humanity, justice, temperance, and transcendence. Each strength is thoroughly examined in its own chapter, with special attention to its meaning, explanation, measurement, causes, correlates, consequences, and development across the life span, as well as to strategies for its deliberate cultivation. This book demands the attention of anyone interested in psychology and what it can teach about the good life.

Focusing on experimental methods, authors Anne Myers and Christine Hansen lead students step by step through the entire research process, from generating testable hypotheses to writing the research report. The major sections of the book parallel the major sections of a research report (Introduction, Method, Results, and Discussion), giving students the skills they'll need to design and conduct an experiment, analyze and interpret the research findings, and report those findings. Although the main focus is on experimentation, alternative approaches are discussed

as important complements. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.
