These parameters may be temporal equalities, such as 10 seconds; temporal inequalities, such as less than 10 seconds; or temporal ranges, such as between 10 seconds and 1 minute. Duration relations specify relationships between the durations of intervals, such as requiring that the duration of two media segments be equal, that one duration be twice as long as another, or that one duration be "shorter" than another.

Relational operators, such as join, are generalized to support a natural treatment of interval data, such as sequences of dates or moments in time, for instance in temporal databases. Sixth normal form is then based on this generalized join, as follows:
