The lines used to draw trees look better if this package is used with the styles epic.sty and eepic.sty. which provide enhancements to the LaTeX picture environment. This version of qtree will automatically include eepic.sty if it can find it, so if eepic.sty is in the style files directory, it should not be necessary to give " eepic " as a style argument.

TikZ/PGF is a flexible and powerful package for creating graphics in LaTeX. It's syntax can be somewhat overwhelming at the beginning. In this post I show the basics of tree drawing using TikZ and LuaLaTeX. The following code only works with LuaLaTeX. Make sure you use the luatex engine rather than standard tex/latex for typesetting.

`tikz-qtree` - Use existing `qtree` syntax for trees in TikZ. The package provides a macro for drawing trees with TikZ using the easy syntax of Alexis Dimitriadis' `Qtree`. It improves on TikZ's standard tree-drawing facility by laying out tree nodes without collisions; it improves on `Qtree` by adding lots of features from TikZ (for example, edge labels, arrows between nodes); and it improves on `pst-qtree` in being usable with pdf T.
