Thanks to years of research and development by vehicle manufacturers, suppliers, legislation, and the entire safety community, the side airbag has become a critical safety device to reduce injury and save lives. This new collection of technical research highlights the progression of these essential safety features, providing a complete and thorough perspective through the analysis of both early patents and recent side airbag system developments. *Advances in Side Airbag Systems* begins with an introduction by editor Donald E. Struble, chronicling the progress made since the mid-1980s in offering improved side impact protection to the motoring public. Authored by leading experts in their respective fields, this book features a comprehensive collection of 26 landmark technical papers. Its scope includes not only thorax airbags, but other inflatable devices designed for side impacts and rollovers. To the extent that technological infrastructure considerations are unique to side airbags, papers in these areas are included as well.

This book is one of the first to specifically address the subsidiary development process - a phenomenon by which multinational company subsidiaries enhance their resources and capabilities. It shows how this process is integral to multinational corporate evolution, which is largely driven by changes in subsidiaries and their development. It also illustrates how the recent trend towards greater international dispersal of value-adding activities has impacted on this process and on multinational evolution as a whole. This book analyzes how transport influences the ecology of various regions. Integrating perspectives and approaches from around the globe, it examines the use of different types of engines and fuels, and assesses the impact of vehicle design on the environment. The book also addresses the effect of the transport situation in agglomerations on their environmental safety. Various types of environmental impacts are considered, from traditional emissions to noise and vibration. Presenting scientific advances from 7 European countries, the book appeals to experts, teachers and students, as well as to anyone interested in the environmental aspects of the transport industry.

For nearly twenty years, EU antitrust enforcement has been governed by Regulation 1/2003, which ushered in a sweeping reform of the procedures for the application of Articles 101 and 102 TFEU. This systematic article-by-article expert commentary on the Regulation, with additional perspectives and critical views by particularly experienced and qualified authors, provides an in-depth examination of the Regulation's legal achievements, implications, and promise for the future. Analysis of each of the Regulation's articles covers such aspects as: legislative history; rationale and context; practice of the Commission and, where relevant, of the national competition authorities; case law of the Court of Justice of the European Union; international aspects; and outstanding and problematic issues. Along with many of the article commentaries, 'boxes' have been added on specific issues of particular salience. The critical reflections of the book's second part include perspectives from members and staff of the Court of Justice of the European Union and of the European Commission's Directorate General for Competition and Legal Service, heads of national competition authorities and of national courts, counsel, economists, consumer organisations, and academics. There are also comparisons with various aspects of antitrust enforcement in France, Germany, the Netherlands, and the United States. With this unparalleled book, practitioners and in-house counsel, as well as case-handlers and policymakers, will approach any competition case before the Commission with full awareness of the applicable procedural rules. They will gain a clear understanding of the enforcer's powers and duties, as well as of the various options available to the undertakings involved in antitrust proceedings and their rights.
