The Mann-Whitney U test tests a null hypothesis of that the probability that a randomly drawn observation from one group is larger than a randomly drawn observation from the other is equal to 0.5 against an alternative that this probability is not 0.5 (see Mann-Whitney U test#Assumptions and formal statement of hypotheses).

The Mann-Whitney U test is also known as the Mann-Whitney-Wilcoxon, Wilcoxon-Mann-Whitney, and the Wilcoxon Rank Sum. A Mann-Whitney U test is typically performed when each experimental unit, (study subject) is only assigned one of the two available treatment conditions.

Berdasarkan output “Test Statistics” dalam uji mann-whitney di atas diketahui bahwa nilai Asymp. Sig. (2-tailed) sebesar 0,000 lebih kecil dari < nilai probabilitas 0,05. Oleh karena itu, sebagaimana dasar pengambilan keputusan uji mann-whitney di atas maka dapat disimpulkan bahwa “Ha diterima.” Dengan demikian dapat dikatakan bahwa ada ...

1 Introduction The Mann-Whitney U test is a non-parametric test that can be used in place of an unpaired t-test. It is used to test the null hypothesis that two samples come from the same population (i.e. have the same median) or, alternatively, whether observations in one sample tend to be larger than observations in the other.
