"Of the Nature of Things" is a first-century BCE didactic poem by the Roman poet and philosopher Lucretius to explain Epicurean philosophy to a Roman audience. In this work, T. Lucretius Carus presents the view that the world can be described by the function of material forces and natural laws. So, one should not fear the gods or death.

Statistics and Probability for Engineering Applications provides a complete discussion of all the major topics typically covered in a college engineering statistics course. This textbook minimizes the derivations and mathematical theory, focusing instead on the information and techniques most needed and used in engineering applications. It is filled with practical techniques directly applicable on the job. Written by an experienced industry engineer and statistics professor, this book makes learning statistical methods easier for today's student. This book can be read sequentially like a normal textbook, but it is designed to be used as a handbook, pointing the reader to the topics and sections pertinent to a particular type of statistical problem. Each new concept is clearly and briefly described, whenever possible by relating it to previous topics. Then the student is given carefully chosen examples to deepen understanding of the basic ideas and how they are applied in engineering. The examples and case studies are taken from real-world engineering problems and use real data. A number of practice problems are provided for each section, with answers in the back for selected problems. This book will appeal to engineers in the entire engineering spectrum (electronics/electrical, mechanical, chemical, and civil engineering); engineering students and students taking computer science/computer engineering graduate courses; scientists needing to use applied statistical methods; and engineering technicians and technologists. \* Filled with practical techniques directly applicable on the job \* Contains hundreds of solved problems and case studies, using real data sets \* Avoids unnecessary theory

The present revised edition is an attempt to understand how industrial labor was transformed and to identify the historical process by which good jobs were created. It is, therefore, an account of the bureaucratization of employment, since many of the features that define good jobs; stability, internal promotion, and rule-bound procedures are characteristic of bureaucratic organizations. The book also examines the upheaval in the labor markets of the 1980's and 1990's, which has caused a reduction in the number of good jobs. Chapter 9 in this revised edition carries the narrative forward from 1945 to the present time, examining both the high-point of the bureaucratic system in the 1950's and 1960's--the golden years--and its erosion since

then.

This book represents a unique study which reviews employment conditions in Asia and the Pacific in the context of globalization and increasing pressure towards flexibilization. It places a strong focus on the diverging experiences of individual workers in their employment conditions such as employment status, wages/incomes, working time, work organizations and health and safety. Along with thematic studies concerning the roles of workers voice and labour regulation in determining employment conditions, this book includes nine country studies which have been undertaken based on a common research framework for a more rigorous comparison in the region. A systematic review of employment conditions in the countries which are carefully selected in the region National-level analysis based on a common research framework A highly analytical and timely analysis of workers voice and labour regulation with respect to employment conditions

This book exposes a series of main macroeconomics theories. I said 'a series' because the exposition follows an evolutionary approach. Dr. Anggito Abimayu Secretary General of Indonesian Economists Association, Former Chair of Fiscal Policy Agency of Republic of Indonesia

A full-text reporter of decisions rendered by federal and state courts throughout the United States on federal and state labor problems, with case, table and topical index.

Against the backdrop of the global financial crisis and rising food, fuel, and commodity prices, addressing poverty and inequality in the Philippines remains a challenge. The proportion of households living below the official poverty line has declined slowly and unevenly in the past four decades, and poverty reduction has been much slower than in neighboring countries such as the People's Republic of China, Indonesia, Thailand, and Viet Nam. Economic growth has gone through boom and bust cycles, and recent episodes of moderate economic expansion have had limited impact on the poor. Great inequality across income brackets, regions, and sectors, as well as unmanaged population growth, are considered some of the key factors constraining poverty reduction efforts. This publication analyzes the causes of poverty and recommends ways to accelerate poverty reduction and achieve more inclusive growth. It also provides an overview of current government responses, strategies, and achievements in the fight against poverty and identifies and prioritizes future needs and interventions. The analysis is based on current literature and the latest available data, including the 2006 Family Income and Expenditure Survey.
