The workshop is looking at effective use of irrigation and best practice for soil and water management for farmers and growers in East Anglia. This aims are: Enhance best practice and use of irrigation

in East Anglia; Encourage debate and discussion about efficient water use and ways of improvement for businesses Seasonal water management for potatoes Our latest advice on common scab control, information on varietal resistance to the disease. The timing of first irrigation based on varieties and soil type. **water management for field vegetable crops - Irrigation UK**  
**Water Management For Potatoes Uk Irrigation Ukia**

“Potato tubers contain no less than 80 per cent water; the rule of thumb is that the potato crop needs an inch of water per week to produce a good quality crop.” Whenever potato plants are subjected to small moisture deficiencies, Banks says the growth rate is reduced, and the moisture stress on the plant will affect both the quality and yield of tubers.

**Water Management For Potatoes Uk**  
The UK potato industry is a potentially large market that could benefit from quality composts, with potatoes planted on 121,800ha of agricultural land in the

UK in 2012. If compost was applied to a quarter of this area at an application rate of 30t/ha, just under a million tonnes of quality organic matter would be beneficially recycled.

The Water Management Society. The Water Management Society (WMSoc) is a not-for-profit membership organisation that has been providing practical and technical training solutions to individuals and companies within the water management industry for over 40 years.
