In Learning Web Design, author Jennifer Niederst shares the knowledge she's gained from years of web design experience, both as a designer and a teacher. This book starts from the beginning-defining the Internet, the Web, browsers, and URLs-so you don't need to have any previous knowledge about how the Web works. After reading this book, you'll have a solid foundation in HTML, graphics, and design principles that you can immediately put to use in creating effective web pages. In the second edition, Jennifer has updated the book to cover style sheets and reflect current web standards. She has also added exercises that help you to learn various techniques and short quizzes that make sure you're up to speed with key concepts. Learning Web Design: • Covers the nuts and bolts of basic HTML and style sheets, with detailed examples of formatting text, adding graphic elements, making links, creating tables and frames, and using color on the Web. Also contains tips on handling these tasks using three popular web authoring programs. • Explains whether to use GIFs or JPEGs for different types of images, includes important tips on optimizing graphics for web delivery, and provides step-by-step demonstrations of creating graphics using three popular web graphic tools. • Provides dozens of web design dos and don'ts, to help you make good web design decisions and avoid common beginner traps. • Contains hands-on exercises throughout the book that allow you to try out new techniques along the way. Unlike other beginner books, Learning Web Design leaves no holes in your education. It gives you everything you need to create basic web sites and will prepare you for more advanced web work. If you are interested in web design, this book is the place to start. The enclosed CD-ROM contains material for all the exercises in the book, as well as trial versions of Macromedia Fireworks MX and Homesite 5; Adobe Photoshop 7 and ImageReady 7; and BBEdit 7.

It's the only book you'll need in your baby's first year. Packed with practical advice, Baby on Board is a must-read for all mums and dads. Babies have basic biological needs, which parents must meet. 'Baby on Board' outlines these needs clearly and explains the biological science underpinning them. This wonderful book gives parents the confidence they need to derive for themselves how to parent their baby successfully. It helps them navigate the endless advice directed their way by well-meaning family, friends, and passers-by. One issue that causes parents the most anguish - how to settle their distressed and crying baby - is explored in detail. Written in an accessible and frequently humorous way, Dr Chilton explains the fundamentals of parenting based on science and his forty years' experience as a neonatologist. He also explores the fascinating subject of how babies evolved over the millennia, what they perceive and how they are programmed for survival. This expanded edition has new chapters on the introduction of solids, how to play with your baby, and the essential drivers of baby sleep and how to enhance them. Many other chapters have been revised and updated. Dr Chilton's daughter, Georgina Dowden, with whom he collaborates professionally, has extensively rewritten the breastfeeding chapter. She has also contributed many useful additions, with her influence evident throughout the book.

Decades of research have demonstrated that the parent-child dyad and the environment of the familyâ€"which includes all primary caregiversâ€"are at the foundation of children's well-being and healthy development. From birth, children are learning and rely on parents and the other caregivers in their lives to protect and care for them. The impact of parents may never be greater than during the earliest years of life, when a child's brain is rapidly developing and when nearly all of her or his experiences are created and shaped by parents and the family environment. Parents help children build and refine their knowledge and skills, charting a trajectory for their health and well-being during childhood and beyond. The experience of parenting also impacts parents themselves. For instance, parenting can enrich and give focus to parents' lives; generate stress or calm; and create any number of emotions, including feelings of happiness, sadness, fulfillment, and anger. Parenting of young children today takes place in the context of significant ongoing developments. These include: a rapidly growing body of science on early childhood, increases in funding for programs and services for families, changing demographics of the U.S. population, and greater diversity of family structure. Additionally, parenting is increasingly being shaped by technology and increased access to information about parenting. Parenting Matters identifies parenting knowledge, attitudes, and practices associated with positive developmental outcomes in children ages 0-8; universal/preventive and targeted strategies used in a variety of settings that have been effective with parents of young children and that support the identified knowledge, attitudes, and practices; and barriers to and facilitators for parents' use of practices that lead to healthy child outcomes as well as their participation in effective programs and services. This report makes recommendations directed at an array of stakeholders, for promoting the wide-scale adoption of effective programs and services for parents and on areas that warrant further research to inform policy and practice. It is meant to serve as a roadmap for the future of parenting policy, research, and practice in the United States.

Why attractive things work better and other crucial insights into human-centered design Emotions are inseparable from how we humans think, choose, and act. In Emotional Design, cognitive scientist Don Norman shows how the principles of human psychology apply to the invention and design

of new technologies and products. In *The Design of Everyday Things*, Norman made the definitive case for human-centered design, showing that good design demanded that the user's must take precedence over a designer's aesthetic if anything, from light switches to airplanes, was going to work as the user needed. In this book, he takes his thinking several steps farther, showing that successful design must incorporate not just what users need, but must address our minds by attending to our visceral reactions, to our behavioral choices, and to the stories we want the things in our lives to tell others about ourselves. Good human-centered design isn't just about making effective tools that are straightforward to use; it's about making affective tools that mesh well with our emotions and help us express our identities and support our social lives. From roller coasters to robots, sports cars to smart phones, attractive things work better. Whether designer or consumer, user or inventor, this book is the definitive guide to making Norman's insights work for you.

The brain ... There is no other part of the human anatomy that is so intriguing. How does it develop and function and why does it sometimes, tragically, degenerate? The answers are complex. In *Discovering the Brain*, science writer Sandra Ackerman cuts through the complexity to bring this vital topic to the public. The 1990s were declared the "Decade of the Brain" by former President Bush, and the neuroscience community responded with a host of new investigations and conferences. *Discovering the Brain* is based on the Institute of Medicine conference, *Decade of the Brain: Frontiers in Neuroscience and Brain Research*. *Discovering the Brain* is a "field guide" to the brain--an easy-to-read discussion of the brain's physical structure and where functions such as language and music appreciation lie. Ackerman examines: How electrical and chemical signals are conveyed in the brain. The mechanisms by which we see, hear, think, and pay attention--and how a "gut feeling" actually originates in the brain. Learning and memory retention, including parallels to computer memory and what they might tell us about our own mental capacity. Development of the brain throughout the life span, with a look at the aging brain. Ackerman provides an enlightening chapter on the connection between the brain's physical condition and various mental disorders and notes what progress can realistically be made toward the prevention and treatment of stroke and other ailments. Finally, she explores the potential for major advances during the "Decade of the Brain," with a look at medical imaging techniques--what various technologies can and cannot tell us--and how the public and private sectors can contribute to continued advances in neuroscience. This highly readable volume will provide the public and policymakers--and many scientists as well--with a helpful guide to understanding the many discoveries that are sure to be announced throughout the "Decade of the Brain."

During the past thirty years, companies have recognized the consumer as the key driver for business and product success. This recognition has, in turn, generated its own drivers: sensory analysis and marketing research, leading first to a culture promoting the expert and then evolving into the systematic acquisition of consumer-relevant information to build businesses. *Sensory and Consumer Research in Food Product Design and Development* is the first book to present, from the business viewpoint, the critical issues faced by business leaders from both the research development and business development perspective. This popular volume, now in an updated and expanded second edition, presents a unique perspective afforded by the author team of Moskowitz, Beckley, and Resurreccion: three leading practitioners in the field who each possess both academic and business acumen. Newcomers to the field will be introduced to systematic experimentation at the very early stages, to newly emerging methods for data acquisition/knowledge development, and to points of view employed by successful food and beverage companies. The advanced reader will find new ideas, backed up by illustrative case histories, to provide another perspective on commonly encountered problems and their practical solutions. This book is aimed at professionals in all sectors of the food and beverage industry. *Sensory and Consumer Research in Food Product Design and Development* is especially important for those business and research professionals involved in the early stages of product development, where business opportunity is often the greatest.

You'll also benefit from coverage of A quick start guide to advertising A thorough introduction to what advertising is, including its purpose, categories, forms, media channels, social media listening, and its creators Creative thinking strategies and how to generate ideas based on creative briefs Utilizing brand archetypes and creating unique branded content Composition by design, including the parts of an ad, the relationship between images and copy, basic design principles, and points of view How to build a brand narrative in the digital age Copywriting how-to's for art directors and designers Experiential advertising An examination of digital design, including subsections on the basics of mobile and desktop website design, motion, digital branding, and social media design Perfect for students and instructors of advertising design, art direction, graphic design, communication design, and copywriting, *Advertising by Design* also will earn a place in the libraries of business owners, executives, managers, and employees whose work requires them to understand and execute on branding initiatives, advertising campaigns, and other customer-facing content.

Children are already learning at birth, and they develop and learn at a rapid pace in their early years. This provides a critical foundation for lifelong progress, and the adults who provide for the care and the education of young children bear a great responsibility for their health, development, and learning. Despite the fact that they share the same objective - to nurture young children and secure their future success - the various practitioners who contribute to the care and the education of children from birth through age 8 are not acknowledged as a workforce unified by the common knowledge and competencies needed to do their jobs well. *Transforming the Workforce for Children Birth Through Age 8* explores the science of child development, particularly looking at implications for the professionals who work with children. This report examines the current capacities and practices of the workforce, the settings in which they work, the policies and infrastructure that set qualifications and provide professional learning, and the government agencies and other funders who support and oversee these systems. This book then makes recommendations to improve the quality of professional practice and the practice environment for care and education professionals. These detailed recommendations create a blueprint for action that builds on a unifying foundation of child development and early learning, shared knowledge and competencies for care and education professionals, and principles for effective professional learning. Young children thrive and learn best when they have secure, positive relationships with adults who are knowledgeable about how to support their development and learning and are responsive to their individual progress. *Transforming the Workforce for Children Birth Through Age 8* offers guidance on system changes to improve the quality of professional practice, specific actions to improve professional learning systems and workforce development, and research to continue to build the knowledge base in ways that will directly advance and inform future actions. The recommendations of this book provide an opportunity to improve the quality of the care and the education that children receive, and ultimately improve outcomes for children.
