### What Is Push Technology? - Glossary Of Tech Terms ...

Push technology is a service that pushes information to a client from a server. This is the opposite of a traditional client/server model whereby a client such as a web browser requests information such as a web page. The following are illustrative examples of push technology.

Quickly build real-time, secure, high-performance applications that scale easily and satisfy today's consumer expectations.

### What Is Push Technology - btgresearch.org

Push technology is a type of communication that takes place over the Internet when data is pushed from a server to a client without the client requesting it. Most push technologies must be authorized or subscribed too.

Technology Push is when research and development in new technology, drives the development of new products. Technology Push usually does not involve market research. It tends to start with a company developing an innovative technology and applying it to a product.

### Push technology - Wikipedia

Push technology, or server push, is a style

of Internet -based communication where the request for a given transaction is initiated by the publisher or central server. It is contrasted with pull /get, where the request for the transmission of information is initiated by the receiver or client . Push services are often based on information preferences expressed in advance.

Pull technology refers to clients that make requests to servers. This is the traditional way to structure a client/server architecture. Push technology refers to servers that initiate information updates to clients.

What Is Push Technology Push technology is an internet communication system in which the transaction request is generated by the central web server or publisher. Push technology is the opposite of pull

technology, where the information transmission request is made by the clients or receivers. This phenomenon is used to describe the

Push technology (Webcasting) is the prearranged updating of news, weather, or other selected information on a computer user's desktop interface through periodic and generally unobtrusive transmission over the World Wide Web (including the use of the Web protocol on intranet). Webcasting is a feature of the Microsoft Internet Explorer browser and Netscape's Netcaster, part of its Communicator suite.
