How to Build a Wireless Home Network - lifewire.com

Wi-Fi is an industry name for networking products. You'll find a black-and-white Wi-Fi logo or certification emblem on virtually any new wireless equipment you buy. Technically speaking, Wi-Fi signifies conformance to the 802.11 family of wireless communication standards.

Wi-Fi Explained. When you connect your laptop to a hotspot at a coffee shop or hotel, or you create a wireless network in your home, you're using a WiFi wireless network. So, just what is WiFi? The term stands for Wireless Fidelity and means that a device is compatible with the 802.11 standard, the established standard for wireless networks.

Your home network is not just about better Wi-Fi. It's about making real connections to all that you love in life. So, whether you're a first-timer setting up your very own home network, a power-user who needs faster internet for over 20 devices, or just expanding your Wi-Fi coverage for your growing family, there's a D-Link device that fits your home perfectly.

We use Wi-Fi connections to stream videos and music on mobile devices, conveniently connect laptops and link IoT devices to our home network. Essentially, we use Wi-Fi for just about everything, which means your Wi-Fi service can use up a lot of data. Going over a data limit can result in added fees or slowed internet speeds.
